webMethods Module 9.6 for HIPAA Readme

April 2016

This file contains important information you must read before using webMethods Module 9.6 for HIPAA. You can find system requirements, user documentation, and installation and upgrade instructions on the Documentation website or the TECHcommunity website. At those locations, you can also find suite-related security and globalization information.

Included in this file is information about functionality that has been added, removed, deprecated, or changed for this product. Deprecated functionality continues to work and is supported by Software AG, but may be removed in a future release. Software AG recommends against using deprecated functionality in new projects.

1.0 Critical Information

This section lists any critical issues for the current release that were known when this readme was published. For critical information found later, go to the Knowledge Center on the Empower website.

2.0 Known Issues

This section lists any issues for the current release that were known when this readme was published. For known issues found later, go to the Knowledge Center on the Empower website.

- WMH-252

  webMethods Module 9.6 for HIPAA fails to validate a valid Social Security Number in the NM109 field of the 278 message in the Loop 2010B.

  The module identifies the value in the field NM109 as the Social Security Number only when the value of NM108 field is set to 34. The validation of NM109 fails even though the condition is met because the module considers the format of the value to be incorrect.

  There is currently no workaround for this issue.

- WMH-250

  webMethods Module 9.6 for HIPAA does not list the code set values in the View page after reloading the WmHIPAA package.

  View page to view code sources does not list the code set values when the WmHIPAA package is reloaded after table creation.

  To work around this issue, click the Search button which will list all the code set values in that Code source.

- WMH-221

  Validation passes even though value of REF03 field is missing when REF01 is 0B in 5010-278 message for the Loop 2010F.

  In the 5010-278 message when 2010F-REF01=0B then the field REF03 is required. But the Module 9.6 for HIPAA does not report an error even though value of REF03 field is missing.

  There is currently no workaround for this issue.

3.0 Usage Notes

This section provides any additional information you need to work with the current release of this product.

4.0 Other Resolved Issues

This section lists the issues that were resolved in each release. A release is listed in this section only if changes occurred in that release.

5.0 Documentation Changes

This section describes significant changes to the documentation, such as the addition, relocation, or removal of product guides, online help, chapters, or other major content. A release is listed in this section only if changes occurred in that release.

Release 9.6

- The new *webMethods Module for HIPAA Installation and User's Guide* describes how to install, configure, and use webMethods Module for HIPAA.

6.0 Terminology Changes

A release is listed in this section only if changes occurred in that release.

7.0 Added, Removed, Deprecated, or Changed Items

This section lists features, functionality, controls, portlets, properties, or other items that have been added, removed, deprecated, or changed. A release is listed in this section only if changes occurred in that release.

8.0 Added, Removed, Deprecated, or Changed Built-In Services

A release is listed in this section only if changes occurred in that release.

9.0 Added, Removed, Deprecated, or Changed Parameters

A release is listed in this section only if changes occurred in that release.

10.0 Added, Removed, Deprecated, or Changed APIs

A release is listed in this section only if changes occurred in that release.
