```

| SEL001 | **Unexpected end-of-file on DDKARTE** |

Explanation An end-of-file was reached on the DD/KARTE data set before ADASEL expected to reach an end-of-file. Most likely, the supplied input statements are incomplete.

Action See the ADASEL syntax description in the Adabas Utilities documentation. Correct the input statements, then rerun the ADASEL job.

| SEL002 | **Syntax - undefined, illegal or incorrect syntax positioning of a parameter or symbol** |

Explanation The input string marked by " <---- " does not match the ADASEL syntax.

Action See the ADASEL syntax description in the Adabas Utilities documentation. Correct the input statement syntax, then rerun the ADASEL job.

| SEL003 | **Statement table overflow - increase LST** |

Explanation The value specified by the SET GLOBALS parameter, LST, does not define an ADASEL translation table large enough for all the statements that match the SELECT argument.

Action Specify a SET GLOBALS statement with an LST value larger than the current specified or default value. The SET GLOBALS statement must come before the other ADASEL input statements. See the Adabas Utilities documentation for more information.

SEL004   **Syntax - value length exceeds the maximum field definition limit**

Explanation   The input string marked by " <---- " is longer than 253 bytes.

Action   Correct the string length, then rerun the ADASEL job.

SEL005   **Syntax - unexpected or missing quote**

Explanation   ADASEL detected an uneven number of apostrophes ('). All alphanumeric and
                        hexadecimal values must be specified in pairs of apostrophes; apostrophes in an
                        alphanumeric string must be doubled (as in '...don' 't forget...')

Action   Ensure that all specified apostrophes are paired, then rerun the ADASEL job.

SEL006   **Syntax - a numeric value specified for a binary field must be -2 147 483 648 < VAL
                        < 2 147 483 647**

Explanation   A binary value in an ADASEL search criterion must be in the range of a two's
                        complement value that fits within a fullword. The value specified was not recognized to
                        be within this range.

Action   Correct the value specification and rerun the ADASEL job.

SEL007   **Syntax - missing trailing blank**

Explanation   The ADASEL syntax elements must be embedded in blanks.

Action   See the ADASEL syntax description in the Adabas Utilities documentation. Correct the
                        input statement syntax, then rerun the ADASEL job.

SEL008   **Syntax - illegal hex digit or an odd number of hex digits were specified**

Explanation   Hexadecimal values must be paired, and be valid characters.

Action   See the ADASEL syntax description in the Adabas Utilities documentation. Correct the
                        input statement syntax, then rerun the ADASEL job.

SEL009   **Syntax - numeric value contained more than 29 digits**

Explanation   Adabas generally does not allow unpacked decimal values longer than 29 bytes.

Action   Supply a correct numeric value of 29 or fewer packed characters, then rerun the
                        ADASEL job.

SEL010   **Syntax - illegal numeric value**

Explanation   The specified numeric value for the ADASEL criterion is invalid.

Action   Check the criterion specification, and then rerun the ADASEL job.

SEL011   **Value table overflow - increase NV**

Explanation   The ADASEL table allocated for evaluating field values is not large enough.

Action   Specify a larger table value by using the SET GLOBALS statement parameter, NV. The
                    SET GLOBALS statement must come before the other ADASEL input statements. See
                    the Adabas Utilities documentation for more information.

SEL012   **Internal logic failure - contact your local Adabas support representative**

Explanation   An internal error occurred while ADASEL was checking the input statement syntax.

Action   Record and/or save all output from the job, your input statements and any dump, then
                    contact Software AG technical support for additional instructions.

SEL013   **Invalid file number. File number must be 0<FNR<=MAXFILES (as specified for
                    the database)**

Explanation   The specified file number(s) for FILE must be greater than zero and equal to or less
                    than the value last specified by the MAXFILES parameter in the ADADEF DEFINE
                    utility.

Action   Ensure that the defined file(s) are correct according to MAXFILE, that the specified
                    files actually exist and that no files have been deleted.

SEL014   **File table overflow - increase NF**

Explanation   The allowed number of files for ADASEL processing was exceeded.

Action   Specify a larger file table value by using the SET GLOBALS statement parameter NF.
                    The SET GLOBALS statement must come before the other ADASEL input statements.
                    See the Adabas Utilities documentation for more information.

SEL015   **No FDT read due to absent or inaccurate ASSO data set or because the file is not loaded**

Explanation   One or more of the specified files is not available for ADASEL processing. The unavailable file(s) are either locked by the Adabas nucleus, or have not been loaded into the database.

Action   Either correct the ADASEL FILE specification to remove the files in question, or resubmit the job later when the files are available.

SEL016   **Syntax - invalid DATE/TIME value specified**

Explanation   The "starting from" and "ending at" date/time specification was incorrect. The format may be any one of the following:

```
yyyymmdd/hhmmss
 J(yyyyddd hhmmss)
 X'xxxx xxxx'
```

Action   Correct the date/time specification and rerun the ADASEL job.

SEL017   **Syntax - password/cipher value length exceeds 8 characters or digits**

Explanation   The password/cipher specified for the ADASEL run had an incorrect length.

Action   Correct the password/cipher value and rerun the ADASEL job.

SEL018   **Syntax - undefined or illegal field name**

Explanation   The specified ADASEL fieldname is incorrect, or does not exist.

Action   Specify a correct fieldname, then rerun the ADASEL job.

SEL019   **Syntax - field name specified is not an elementary (*name*) a group or PE (*periodic*) - group name is not permitted**

Explanation   A field was specified for ADASEL that is not an elementary field, or the index value for a periodic group field was forgotten. Multiple-value and periodic group names, super-, sub-, hyper- or phonetic descriptor fields are not allowed.

Action   Respecify the field correctly, then rerun the ADASEL job.

SEL020   **Syntax - invalid periodic index specified (must be 0 < PE <= 191)**

Explanation   A periodic group field was specified for ADASEL with an incorrect or invalid index
                    value.

Action   Specify the correct index value and rerun the ADASEL job.

SEL021   **Syntax - illegal hyphen specified in an index**

Explanation   A periodic group's field or multiple-value field's occurrence contained an illegal
                    hyphen in the index portion of the specification.

Action   Correct the specification and rerun the ADASEL job.

SEL022   **Syntax - an index is specified for a non1-indexable field name; i.e., not an MU- or
                    PE-field**

Explanation   An index value or range was specified for a field that is neither in a periodic group nor
                    an occurrence in an multiple-value field.

Action   Remove the index value from the field specification, or correct the field name to show a
                    periodic group or multiple-value field.

SEL023   **Syntax - missing or illegal MU-index**

Explanation   A multiple-value field was specified for ADASEL with an incorrect or missing index
                    value.

Action   Specify the correct index value and rerun the ADASEL job.

SEL024   **Syntax - 'FROM' index value is > 'TO' index value**

Explanation   The "FROM" index specification for a multiple-value (MU) or periodic group (PE)
                    field for the ADASEL job is greater than the "TO" index specification.

Action   Specify correct index value(s) and rerun the job.

SEL025   **Syntax - fields defined with a format of float are not permitted to be specified**

Explanation   A field was defined for ADASEL that is in floating-point format. Floating point fields
                    cannot be specified in an ADASEL search argument.

Action   Respecify the ADASEL search argument using non-floating-point field name(s).

SEL026   **Syntax - missing quote(s) for an alphameric value**

Explanation   An alphanumeric value was specified without being enclosed in apostrophes ([X]'...').

Action   Correct the value specification and rerun the ADASEL job.

SEL027   **Internal logic failure - contact your local Adabas support representative**

Explanation   An internal logic error occurred during ADASEL processing.

Action   Record and save all output from the job, your input statements, and any dump. Then contact your Software AG technical support representative for assistance.

SEL029   **Syntax - illegal FROM/THRU/BUT NOT value specified; i.e., EQUAL > THRU or BUT NOT > THRU, etc**

Explanation   An incorrect ADASEL criterion value range was specified.

Action   Correct the EQUAL ..., THRU ...(through ...), and/or BUT NOT... values and rerun the ADASEL job.

SEL030   **Syntax - value length exceeds the fixed length defined for this field**

Explanation   The field selected by the ADASEL criterion is defined with the fixed-length (FI) option, but the value specified for the field is longer than allowed by the field's FDT definition.

Action   Correct the value size and rerun the ADASEL job.

SEL031   **Syntax - maximum number of IF - levels exceeded. Increase NIF**

Explanation   The number of "nested" IF levels in the ADASEL IF/THEN [ELSE] statement is more than allowed. The number of IF... levels is controlled by the ADASEL SET GLOBALS/NIF parameter.

Action   Specify a larger IF... count by using the SET GLOBALS statement parameter NIF. The SET GLOBALS statement must come before the other ADASEL input statements. See the Adabas Utilities documentation for more information.

SEL032   **Syntax - Unmatched IF/ELSE statements**

Explanation   ADASEL detected an IF... without an ELSE..., or vice versa. IF... and ELSE...
                    conditional parameters must occur in pairs.

Action   Correct the ADASEL IF/ELSE syntax to create paired conditional parameters, and
                    rerun the job.

SEL033   **Syntax - Unmatched DO/DOEND statements**

Explanation   ADASEL detected a DO... statement without a matching DOEND..., or vice versa.

Action   Correct the ADASEL DO...DOEND syntax to create DO...DOEND pairs, and rerun the
                    job.

SEL034   **Syntax - DDEXPA data set number specified - must be 1 - 20 inclusive**

Explanation   The ADASEL output data set(s) DD/EXPAn was either not numbered or incorrectly
                    numbered. There must be at least one output data set (DD/EXPA1), up to a maximum
                    of twenty, numbered in adjoining ascending order (DD/EXPA1, DDEXPA2, ...
                    DD/EXPA20).

Action   Correct the DD/EXPAn job control statement(s), and rerun the ADASEL job.

SEL035   **Syntax - The year specified in the date must be 1980 or later**

Explanation   The "yyyy" portion of the date specified by the ADASEL input statement must be
                    "1980" or later.

Action   Correct the date and rerun the ADASEL job.

SEL036   **Field description table overflow - increase NV**

Explanation   The table for field evaluations in ADASEL is too small. Each "evaluation" of a field
                    requires one table entry-regardless of whether only one field is evaluated many times or
                    many fields, one time each.

Action   Specify a larger field evaluation table value by using the SET GLOBALS statement
                    parameter, NV. The SET GLOBALS statement must come before the other ADASEL
                    input statements. See the Adabas Utilities documentation for more information.

SEL037   **An undefined ASSO device type was specified. Check the ADARUN DEVICE parameter**

Explanation   A DD/ASSORn job control statement for the ADASEL job specified an incorrect or undefined Associator device type. The default device type is the type specified by the ADARUN DEVICE parameter, but other device types may have been specified for the Associator. The ADAREP utility report or Adabas Online System "Database Report" function shows the devices in use for the Associator.

Action   Correct the DD/ASSORn job control statement, and rerun the ADASEL job.

SEL038   **Invalid TYPE value specified, must be AI/BI/ALL**

Explanation   The ADASEL "SELECT..." specification is incorrect. The choices are before image (BI), after image (AI), or ALL.

Action   Correct the SELECT specification, then rerun the ADASEL job.

SEL039   **Invalid file number specified**

Explanation   The ADASEL FILE... specification specified an invalid file number. There is no FDT for a file with the specified number.

Action   Correct the SELECT specification, then rerun the ADASEL job.

SEL040   **Invalid or illegal FROM/THRU ISN values specified**

Explanation   An ADASEL criterion specified invalid EQUAL... and/or THRU (through)... ISN values.

Action   Correct the SELECT specification, then rerun the ADASEL job.

SEL041   **I/O error on DDKARTE**

Explanation   An input/output error occurred while ADASEL was reading the DD/KARTE input statements.

Action   Record and/or save all output from the job, your input statements and any dump, then contact Software AG technical support for additional instructions.

SEL043   **Table overflow - too many values specified**

Explanation   ADASEL encountered a record that could not be decompressed.

Action   Record and/or save all output from the job, your input statements and any dump, then contact Software AG technical support for additional instructions.

SEL044   **Syntax - invalid or illegal GLOBAL parameter**

Explanation   ADASEL detected an invalid SET GLOBALS statement value. The SET GLOBALS statement, which should come before the ADASEL parameters themselves, overrides default values for the ADASEL parameters.

Action   Correct the SET GLOBALS statement in the ADASEL DD/KARTE job control segment, and rerun the ADASEL job. See the Adabas Utilities documentation for more information.

SEL045   **Unable to obtain sufficient memory for processing - rerun in a larger partition or address space**

Explanation   The ADASEL job could not be run in the existing space.

Action   Allocate more space for this nucleus, then rerun the ADASEL job.

SEL046   **Unable to process Data Storage record due to an invalid MU/PE - count or field length or header**

Explanation   ADASEL detected an incorrect multiple-value field count or periodic group occurrence or a field value was specified that is incompatible with the defined field's actual length or an incorrect record's header. ADASEL could not continue processing.

Action   Correct the incompatibility, then rerun the ADASEL job.

SEL047   **PE-value table overflow - increase LPV**

Explanation   The table for evaluating periodic-group (PE) fields in ADASEL is too small. ADASEL normally computes this size automatically; however, there may have been more occurrences matching the search criterion than normal.

Action   Specify a larger PE field evaluation table value by using the SET GLOBALS statement parameter, LPV. The SET GLOBALS statement must come before the other ADASEL input statements. See the Adabas Utilities documentation for more information.

SEL048   **DDKARTE open failed**

Explanation   ADASEL was unable to open the DD/KARTE input statement data set.

Action   Ensure that the DD/KARTE statement is valid and specifies an available ADASEL job
                   setup. Then rerun the ADASEL job.

SEL049   **I/O error on DDDRUCK**

Explanation   The DD/DRUCK job control statement, which specifies the print output data set for
                   ADASEL, is either incorrect or specifies an unavailable data set or device.

Action   Correct the problem and rerun the ADASEL job.

SEL050   **Error during opening/closing of output file DDEXPA**

Explanation   ADASEL was unable to open/close the data set defined in JCL statement DD/EXPA.

Action   Ensure that the DD/EXPA statement is valid and specifies an available data set. Then
                   rerun the ADASEL job.

SEL051   **Syntax - IF statement not permitted within a DO-group**

Explanation   An ADASEL IF... statement cannot be within a DO...DOEND stream.

Action   Move the IF... statement outside the DO...DOEND stream, or delete one of them. Then
                   rerun the ADASEL job.

SEL052   **Syntax - GLOBAL parameter exceeds the MINIMUM/MAXIMUM values**

Explanation   ADASEL detected an invalid SET GLOBALS parameter value. The value is most
                   likely outside the range allowed for the parameter. The following are some SET
                   GLOBAL parameters and their allowed ranges:

LS:	1-132
PS:	2-999

Action   Correct the SET GLOBALS statement in the ADASEL DD/KARTE job control
                   segment, and rerun the ADASEL job. See the Adabas Utilities documentation for more
                   information.

SEL053   **I/O error encountered on DDSIIN**

Explanation   The DD/SIIN job control statement, which specifies the sequential input (SIBA) log
                   data set for ADASEL, is either incorrect or specifies an unavailable data set or device.
                   Another possible cause is that the DD/SIIN data set is not the sequential output file
                   from an ADARES COPY/PLCOPY operation, as required by ADASEL.

Action   Correct the problem and rerun the ADASEL job.

SEL054   **I/O error encountered on DDEXPA**

Explanation   The DD/EXPA job control statement, which specifies the print output data set for
                   ADASEL, is either incorrect or specifies an unavailable data set or device.

Action   Correct the problem and rerun the ADASEL job.

SEL055   **Warning: Skipping decompressed record**
                   File=*fn* ISN=*isn*
                   LRECL for DDEXPAnn should be = nnnnn or more

Explanation   While decompressing a PLOG data set, ADASEL detected a record that was
                   successfully decompressed but that cannot be written to the output file because it does
                   not fit into the DDEXPA*nn* output buffer and parameter SPANREC was not specified
                   in the OUTPUT statement of the ADASEL job. ADASEL skips the indicated record
                   and continues processing.

Action   The length of the given decompressed PLOG record (including headers) does not
                   exceed the allowable maximum for VB format records, so you can either increase the
                   LRECL value for DDEXPA*nn* as recommended in the message (NNNNN or more) or
                   specify the SPANREC parameter in the ADASEL OUTPUT statement. Then rerun the
                   ADASEL job.

SEL056   **Warning: Skipping decompressed record**
                   File=*fn* ISN=*isn* Decompressed length=*length*
                   Use parameter "SPANREC" of OUTPUT statement for DDEXPAnn

Explanation   While decompressing a PLOG data set, ADASEL detected a record that was
                   successfully decompressed but that cannot be written to the output file because it does
                   not fit into the DDEXPA*nn* output buffer and parameter SPANREC was not specified
                   in the OUTPUT statement of the ADASEL job. ADASEL skips the indicated record
                   and continues processing.

Action   The length of the given decompressed PLOG record (including headers) exceeds the
                   allowable maximum for VB format records, so this record can be written to the output
                   file only in parts. To do this, specify the SPANREC parameter in the ADASEL
                   OUTPUT statement and rerun the job.

SEL057   **ADADEC DECOMPRESS error - processing aborted**

Explanation   While decompressing a file, ADASEL detected a record that it could not decompress.

Action   Record and/or save all output from the job, your input statements and any dump, then
                    contact Software AG technical support for additional instructions.

SEL058   **File is ciphered and cannot be audited**

Explanation   ADASEL cannot be run on ciphered files.

Action   Change the file specification to exclude all ciphered files, then rerun the ADASEL job.

SEL059   **Syntax - CHANGES option not permitted with selection of new or deleted records**

Explanation   The CHANGES option requires both a before (BI) and after (AI) image for comparison
                    following an update (A1/4) command. Either the BI or AI image was not available.

Action   Remove the CHANGES parameter from the ADASEL syntax.

SEL060   **Change pool is too small - increase NCFLD or NCUPD and rerun**

Explanation   The default values of 10 (the count of "field-name" CHANGES... statements) for the
                    NCFLD and NCUPD SET GLOBALS parameters of the ADASEL job are not large
                    enough. These two counts are multiplied to determine the correct value.

Action   Increase one or both of the NCFLD and NCUPD parameters in the SET GLOBALS
                    statement of the ADASEL DD/KARTE job, and rerun the ADASEL job. See the
                    Adabas Utilities documentation for more information.

SEL061   **Syntax - PE/MU index incorrectly specified for CHANGES option**

Explanation   The IF "field-name" CHANGES... conditional statement of an ADASEL job specified a
                    multiple-value (MU) field value or periodic group (PE) occurrence index value that
                    does not exist, or that has no before (BI) and after (AI) image. The field value or group
                    occurrence may have been added or deleted, eliminating one of the required images.

Action   The IF...CHANGES... conditional statement cannot be specified in this case. Redefine
                    the ADASEL statement.

SEL062   **Warning: Skipping decompressed record. ADADEC RC=***rc*
                  text
                  File=*fn* **ISN=***isn* **Field=***fld* **[PE-index=***pe***]**

Explanation   While decompressing a PLOG data set, ADASEL detected a record that it could not
                  decompress. ADASEL skips the indicated record and continues processing. The
                  reason-code (*rc*) and the line of explanatory text (*text*) provide you with more specific
                  information about the error:

Code	Description
4	A conversion error occurred during decompression. The explanatory text (*text*) in the message can be one of the following: • Truncation not possible • Conversion error • LOB error • Null value with NC option
8	The record is too long for the decompression buffer in main storage. The explanatory text (*text*) in the message can be one of the following: • Input record too long

                  Note:
                  The PE-index part of the message text is only printed if the related field is an MU or PE
                  field.

Action   If necessary, record and save all output from the job, your input statements and any
                  dump. Then contact your Software AG technical support representative for assistance.

SEL063   **Utility cannot run with this version**

Explanation   The version indicator returned by the accessed database does not match the version of
                  the active utility.

Action   Correct the database referenced in the ADASEL job and rerun the job.

SEL065   **Syntax - COUNT only valid for MU or PE field**

Explanation   The COUNT option of the DISPLAY instruction can only specify an MU or PE field.

Action   Correct the COUNT option to specify an MU or PE field or remove the COUNT option
                  and rerun the job.

SEL066   **Syntax - DISPLAY BEFORE/BOTH must be preceded by "IF ... CHANGES"**

Explanation   The BEFORE and BOTH options of the DISPLAY instruction can only be specified
                    within IF statements that contain one or more CHANGES criteria.

Action   Correct the DISPLAY instruction syntax and rerun the job.

SEL067   **SELECT FROM FILE not allowed with SELECT FROM USER**

Explanation   You cannot specify a SELECT FROM FILE parameter in the same ADASEL job as a
                    SELECT FROM USER parameter.

Action   Correct the ADASEL syntax and rerun the job.

SEL068   **User table overflow -- Increase NU**

Explanation   The user table allocation was not large enough.

Action   Increase the ADASEL NU global parameter setting (its default is 20) and rerun the job.

SEL069   **Syntax - Field names not allowed with SELECT FROM USER**

Explanation   References to field names were found in a SELECT FROM USER parameter. In a
                    SELECT FROM USER parameter, no field names can be specified in any associated
                    value criteria or in DISPLAY instructions.

Action   Correct the ADASEL syntax and rerun the job.

SEL075   **Error encountered during CHANGE element processing**

Explanation   An internal error occurred in CHANGE ELEMENT processing.

Action   Record or save all output from the job, your input statements, and any dumps. Then
                    contact your Software AG support representative for assistance.

SEL076   **Warning DDEBAND defined, ignored**

Explanation   The FDTINPUT parameter was not specified for an ADASEL run, but the DDEBAND
                    job statement was defined in the JCL for the run. The job statement is ignored.

Action   No action is required for this informational message unless you intended to pull the
                    FDT from DDEBAND. If this is the case, specify the FDTINPUT parameter and rerun
                    the ADASEL job.

SEL077   **Warning DDSAVE defined, ignored**

Explanation   The FDTINPUT parameter was not supplied in an ADASEL run, but the DDSAVE job
                    statement was specified for the run. The job statement is ignored.

Action   No action is required for this informational message unless you intended to pull the
                    FDT from DDSAVE. If this is the case, specify the FDTINPUT parameter and rerun
                    the ADASEL job.

SEL078   **Spanned work pool is too small -- increase LWP and rerun**

Explanation   The global LWP ADARUN parameter value is not large enough. LWP specifies the
                    size of the Adabas work pool which is used for assembling PLOG spanned records.

Action   Increase the LWP parameter setting and rerun the ADASEL job.

SEL079   **Warning. Skipping spanned records**

Explanation   A spanned record was encountered in the PLOG and parameter SPANREC was not
                    specified in the OUTPUT instruction. This record cannot be processed by the ADASEL
                    utility without the SPANREC parameter and is rejected from further processing.

Action   If spanned record processing is required, specify the SPANREC parameter in the
                    ADASEL OUTPUT instruction and rerun the ADASEL job.

SEL080   **Both DDEBAND and DDSAVE defined. Only one allowed for FDTINPUT**

Explanation   Both DDEBAND and DDSAVE job control statements have been defined in the
                    ADASEL job. Only one is allowed, not both.

Action   Correct the ADASEL job and rerun it.

SEL081   **DDEBAND or DDSAVE input must be specified with FDTINPUT option**

Explanation   The FDTINPUT parameter was supplied, but neither the DDEBAND or DDSAVE job
                    control statements were included in the ADASEL job.

Action   Supply a valid DDEBAND or DDSAVE job control statement (but not both) and rerun
                    the job.

SEL082   **DDEBAND input not allowed with SELECT FROM USER**

Explanation   If SELECT FROM USER is specified for an ADASEL run, DDEBAND is not allowed.
Specify DDSAVE instead.

Action   Correct the ADASEL job, specifying DDSAVE and not DDEBAND if SELECT
FROM USER is requested. Then rerun the job.

SEL084   **Error during execution of a sequential read on file DDSAVE:** *rsn-code*

Explanation   An error occurred during a sequential read of DDSAVE. The reason code (*rsn-code*) is
given in the message.

Action   Record or save all output from the job, your input statements, and any dumps. Then
contact your Software AG support representative for assistance.

SEL085   **I/O error during execution of a sequential read on file DDEBAND: rsn-code**

Explanation   An error occurred during a sequential read of DDEBAND. The reason code (*rsn-code*)
is given in the message.

Action   Record or save all output from the job, your input statements, and any dumps. Then
contact your Software AG support representative for assistance.

SEL086   **Incorrect FDT found in input data set**

Explanation   Either the field definition table (FDT) expected in the first record is missing from the
data set or the FDT structure read from the data set does not satisfy the rules.

Action   Verify that the input data set is valid. Supply a correct input data set and rerun the job.
If the problem persists, contact your Software AG technical support representative for
assistance.

SEL087   **The input data set / file DDEBAND does not have V or VB record format**

Explanation   The specified input data set is invalid.

Action   Supply a correct input data set and rerun the ADASEL job.

SEL088   **I/O error during opening/closing of input file DDSAVE:** *rsn-code*

Explanation   An error occurred attempting to open or close the DDSAVE input file. The reason code
                    (*rsn-code*) for the failure is given in the message. The cause is probably a misspelling
                    of a job control statement name or other JCL error.

Action   Investigate the cause of the error; correct it and rerun the job.

SEL089   **I/O error during opening/closing of input file DDEBAND:** *rsn-code*

Explanation   An error occurred attempting to open or close the DDEBAND input file. The reason
                    code (*rsn-code*) for the failure is given in the message. The cause is probably a
                    misspelling of a job control statement name or other JCL error.

Action   Investigate the cause of the error; correct it and rerun the job.

SEL090   **Invalid SAVETAPE supplied**

Explanation   The data set supplied as the DD/SAVE input data set is not a save tape.

Action   Supply a valid save tape and rerun the job.

SEL091   **Insufficient pool size to keep all external FDTs**

Explanation   The pool size for the FDT allocation was insufficient for the number of FDTs found on
                    the save tape. It is possible that the save tape is invalid because the pool size calculation
                    is from the file control block (FCB).

Action   Supply a valid save tape and rerun the job.

SEL092   **Differing FNRs not allowed for DDEBAND FDTINPUT**

Explanation   Multiple file numbers are not allowed when DDEBAND is supplied.

Action   Correct the SELECT parameters and rerun the job.

SEL093   **Requested file not found on SAVETAPE**
                    Required FNR=*fnr*

Explanation   The requested file's FDT is not found on the SAVETAPE. The file number of the
                    requested file is given in the message (*fnr*).

Action   Supply a save tape that contains the FDT needed and rerun the job. If you are unsure of
                    the contents of a save tape, run an ADAREP report from the save tape and review its
                    contents.

SEL094   **SAVETAPE must be from V74 or higher**

Explanation   The supplied save tape was not created using Adabas version 7.4 or later.

Action   Supply a save tape created using Adabas version 7.4 or later and rerun the job.

SEL096   **FDT VERSION DOES NOT MATCH WITH PLOG VERSION**

Explanation   The PLOG provided is for a different version than the FDT supplied on DDEBAND or
                  DDSAVE.

Action   Supply a correct PLOG or input FDT and rerun the ADASEL job.

SEL097   **Warning secondary segment without primary is rejected**

Explanation   A standalone secondary segment (a secondary segment without a primary segment) of a
                  spanned record was encountered in the PLOG. This segment cannot be processed by
                  ADASEL and so is rejected from further processing.

Action   No action is required for this informational message. Probably, Adabas was started with
                  the ADARUN parameter SRLOG=UPD, which instructs the nucleus to write to the
                  PLOG only the modified spanned record segments. If it is necessary to include all
                  spanned PLOG records in ADASEL processing, restart Adabas with the SRLOG
                  parameter set to ALL or PART.

SEL098   **Warning Fieldname *fn* for ISN=*isn* could not be fully processed. The entire value
                  is not present on the PLOG. This record is rejected for further processing**

Explanation   The spanned record field (*fn*) and ISN (*isn*) identified in the message is not available in
                  the PLOG and is specified with CHANGES or value criteria. This record is rejected for
                  further processing.

Action   No action is required for this informational message.

SEL099   **ADASEL terminating due to error**

Explanation   This message typically follows another error message which contains more details
                  about the error and indicates that ADASEL terminated abnormally because the
                  NOUSERABEND parameter was specified.

Action   Analyze the previous errors for the run, correct the error condition, and rerun the
                  ADASEL job.

SEL133   **Warning. PLOG has not been merged**

Explanation   The PLOG was created by an Adabas cluster nucleus and has not yet been merged
                    using the ADARES PLCOPY procedure.

Action   Merge the PLOGs using the ADARES PLCOPY function before you extract data using
                    ADACDC.
