1 Adabas Vista online administration

This document describes the online administration tool Adabas Vista Online Services.

The following topics are provided:

- [Using Online Services](#)
- [System Settings](#)
- [Maintenance](#)
- [Current Activity Displays](#)
- [Special Services](#)
- [Adabas Access Analysis \(AVILOOK\)](#)

Refer to [Adabas System Coordinator online administration](#) for any other administrative functions relating to Adabas Vista.

2 Using Online Services

- Online Services Main Menu 4
- Navigation 5
- Using PF Keys 6
- Help Information 6

The Adabas Vista Online Services application is accessible from Adabas Online System (AOS), either the demo AOS version supplied with Adabas, or the full AOS version.

Online Services Main Menu

▶ To invoke Adabas Vista Online Services

- Either select Adabas Vista from the AOS main menu

Or:

log on to SYSAVI and enter the command MENU.

The Main Menu screen appears:

```
09:19:23      ***** A D A B A S   VISTA SERVICES 8.2.1 *****      2011-02-28
                                     - Main Menu -                               V1MAINM1

      Code      Service
      ----      -
      0      System Settings
      1      Maintenance
      2      Current Activity Displays
      3      Special Services
      4      Avilook
      5      About Adabas Vista
      .      Exit
      ----      -
Code...: _

You can easily switch around the tools for Fastpath, Vista etc by use of
PF11, or use the codes COR, AFP, AVI, AAF, ATM as commands - anytime.

Command ==>
Enter-PF1---PF2---PF3---PF4---PF5---PF6---PF7---PF8---PF9---PF10--PF11--PF12---
      Help      Exit                               Prods Vers
```

The following options are available:

Option	Description
System Settings	Maintain Adabas Vista configuration file and security settings.
Maintenance	Maintain Adabas Vista rules and client runtime controls.
Current Activity Displays	Display the activity of the current session.
Special Services	Provide installation and applied fix information for the Adabas Vista components.
Avilook	File analysis tool.
About Adabas Vista	Display product information.

Note: From the Adabas Vista main menu, you may switch to the online systems of Adabas System Coordinator, Adabas Fastpath, Adabas SAF Security or Adabas Transaction Manager by pressing PF11. This will result in a window appearing within which you can make your product selection. You may also switch from any screen with a command line by entering the appropriate three-character code (for example, AVI for Adabas Vista) as a command. You may only switch to the same version of another online system.

Navigation

You can access screens in two ways:

- sequentially by selecting a menu service and entering it in the Code field; or
- directly by typing a numerical command on the command line.

For example, entering the command 1.1 on the command line directly accesses the Maintain Generations screen within the Rule maintenance function without first accessing the Maintenance menu.

Function	Object	Command
System Settings	Menu	0
	LFILE 152 Maintenance	0.1
	SAF Security Settings	0.2
Maintenance	Menu	1
	Partitioned Files	1.1
	Translation Rules	1.2
	Client Runtime Controls	1.3
Current Activity Displays	Menu	2
Special Services	Menu	3
	Local SYSAVI Services	3.1
AVILOOK	Menu	4

Function	Object	Command
About Adabas Vista	Information	5

Using PF Keys

SYSAMI uses PF keys for various actions. Key functions are standard throughout the system, wherever possible. The PF keys that apply to each screen are indicated at the bottom of the screen.

The following keys apply throughout the system:

PF Key	Function	Description
PF1	Help	invoke the help specific to the current screen
PF3	Exit	quit and return to the previous screen

The following keys apply generally, depending on the type of action or function in use:

PF Key	Function	Description
PF4	Refr	from active screens, refresh the data
PF5	Upd.	from general maintenance screens, commit the update
PF7	Back	from list screens, return to the previous page
PF8	Next	from list screens, move to the next page
PF10	Add	from general maintenance screens, add an object
PF12	Menu	return immediately to the main menu

Help Information

► To invoke Adabas Vista help information

- Press PF1.

The help screen that appears applies to the current screen and may comprise several pages. From each help screen, you can access lower level options or return to previous, higher levels.

An example of a help screen follows:

```
10:54:00      ***** A D A B A S   VISTA SERVICES 8.2.1 *****      2006-05-29
              - Help for Maintain Generations -      Page 1 of 1 V11100H1
```

This screen lists all defined generations.

You may define multiple generations of Adabas Vista rules which allows you to implement different configurations in a controlled manner.

Adabas Vista at runtime always executes using the active generation.

The following options are available:

```
1 ADD          - PF10 Add a new generation
2 DISPLAY     - 'D' = Display information about a generation
3 MODIFY     - 'M' = Modify information about a generation
4 PURGE      - 'P' = Purge a generation and all its rules
5 COPY       - 'C' = Copy a generation and all its rules
6 ACTIVATE   - 'A' = Activate a generation
7 EXPAND     - 'E' = Work with the change deltas for a generation
8 display gentab = Display generation record
9 BROWSE     - 'B' = Browse the base rules for a generation (readonly)
```

Enter options 1 to 9 for Help about the individual functions, or,
. '.' to End Help, '-' for Previous Pages

In the above example, you can navigate by entering

-	to move backwards and up a menu level
1 - 9	to move down a level to the function selected

If the help screen comprises multiple pages, you can enter

+	to move to the next page
-	to move to a previous page until page 1, then back up a level

3 System Settings

- System Settings Menu 10
- Configuration File (LFILE 152) Maintenance 11
- SAF Security Settings 12

This service is used to maintain the Adabas Vista configuration file.

System Settings Menu

▶ **To display the System Settings menu**

- Select service 0 from the main menu.

```
09:45:10      ***** A D A B A S   V I S T A   S E R V I C E S   8 . 2 . 1   *****      2011-02-28
                -   System Settings   -                                     V10000M1

                Code      Service
                ----      -
                1         LFILE 152 Maintenance
                2         SAF Security Settings
                .         Exit
                ----      -
Code...: _

Enter-PF1---PF2---PF3---PF4---PF5---PF6---PF7---PF8---PF9---PF10--PF11--PF12---
      Help      Exit                                          Menu
```

From this menu, you can	Code	Cmd
customize the use of the configuration file (LFILE 152)	1	0.1
Activate security protection for online administration	2	0.2

Configuration File (LFILE 152) Maintenance

▶ To customize the use of LFILE 152

- 1 Select service 1 from System Settings menu or enter the command 0.1 on a command line.

```

+-----+
| 18:24:45          LFILE 152 Maintenance          2006-05-29 |
|                                     U1LFILM2     |
|
| Current Settings for LFILE 152:
|
| Original LFILE = ( 152 , 135  , 18  )
| Current LFILE = ( 152 , 135__ , 18__ )
|                   (effective only for this Natural session)
|
| Default pop-up settings:
| Do you want to see this window again ?
|                   - for the current SYSAVI session... Y
|                   - for future SYSAVI sessions..... Y
|
|                   PF3 Exit      PF5 Update/Confirm
+-----+

```

The LFILE 152 Maintenance window appears.

In the Original LFILE field, the database and file number are displayed for the Adabas Vista configuration file that was allocated to LFILE 152 at the start of your current SYSAVI session.

These values were allocated to LFILE 152 using the static Natural parameter `NTFILE ID=152, . .` or the dynamic Natural parameter `LFILE=(152, . .)`. For more information about specifying LFILE 152, see the installation instructions relevant to your operating system.

In the Current LFILE field, you can change the database and file number to access a different Adabas Vista configuration file.

- 2 Specify the new Adabas Vista configuration file database and file number, if necessary.

The LFILE 152 Maintenance window is displayed whenever an online services function is selected that accesses the Adabas Vista configuration file, making it possible for the user to access multiple configuration files from within a single Natural session.

- 3 Review the default settings.

You may choose to deactivate the LFILE 152 Maintenance window and thus the possibility of changing the Adabas Vista configuration file for just the current session or for all future sessions.

Regardless of the options you choose, you can always modify those choices by invoking the LFILE 152 Maintenance function from System Settings.

SAF Security Settings

▶ **To activate security protection for online administration:**

- Select service 2 from the System Settings menu or enter the command 0.2 on a command line. The SAF Security settings window will appear:

```
13:00:29          SAF Security Settings          2011-02-28
                                                U1SAFSM1

Protect SYSAVI with SAF Security: N (Y/N)
System Coordinator Daemon Group : _____

Action if no daemon available (mark one):
  Disallow all functions: _
  Allow read functions only: _
  Allow all functions: _

          PF3 Exit          PF5 Update/Confirm
```

For an explanation of these settings refer to Activating security protection of online administration for Vista in the Adabas SAF Security documentation.

4 Maintenance

- Maintenance Menu 14
- File Partitioning 15
- File Translation 26
- Client Runtime Controls 55

This service is used to define and maintain the rules and client runtime controls that are required by Adabas Vista.

Maintenance Menu

▶ **To display the Maintenance menu**

- Select service 1 from the main menu.

Note: The Current LFILE 152 Settings window may appear before the Maintenance menu. See the section [System Settings](#) for more information.

```

15:27:37      ***** A D A B A S   VISTA SERVICES 8.2.1 *****      2006-07-18
                - Maintenance -                                     V11000M1

                Code      Service
                ----      -
                1         File Partitioning
                2         File Translation
                3         Client runtime controls
                .         Exit
                ----      -

Code...: _

Command ==>
Enter-PF1---PF2---PF3---PF4---PF5---PF6---PF7---PF8---PF9---PF10--PF11--PF12---
      Help      Exit                                          Menu
    
```

From this menu, you can	Service	Cmd
Maintain partitioned files as described in the section File Partitioning .	1	1.1
Maintain file translation rules as described in the section File Translation .	2	1.2
Maintain client runtime controls as described in the section Client Runtime Controls .	3	1.3

File Partitioning

Note: Partitioned file definitions, which tend to be static in comparison to translation rules, are not currently subject to generations and generation deltas. Generation and delta support is planned for partitioned files. When it is introduced, you will select a generation and delta to work with, in the same way as translation rules. For more information on generations and deltas, please refer to [File Translation](#).

- [List Partitioned Files](#)
- [Add \(Define\) a Partitioned File](#)
- [Display a Partitioned File Definition](#)
- [Modify a Partitioned File Definition](#)
- [Purge a Partitioned File Definition](#)
- [Maintain Partitions](#)

List Partitioned Files

▶ To list the files that have been defined as partitioned

- 1 Select service 1 from the Maintenance menu or enter the command 1.1 on a command line.

```
18:41:24      ***** A D A B A S   VISTA SERVICES 8.2.1 *****      2006-07-18
              - Maintain Partitioned Files -                          V11P00M1

Reposition: Database: _____ File: _____
              Database/File/Name
C <----- Source ----->      Partitioning Field
_          11      300      EMPL1          LAST-NAME
_          11      301      VEHCL2         DATE-OF-MANUFACTURE
_          11      302      EMPL3          AE  A 20
_          11      303      VEHCL4         AG  U 4

Mark with (D)ispl,(M)od,(P)urge,(C)opy,(E)xpand
End of List
Command ==>
Enter-PF1---PF2---PF3---PF4---PF5---PF6---PF7---PF8---PF9---PF10--PF11--PF12---
              Help          Exit  Refr                                Add          Menu
```

- 2 Each partitioned file is uniquely identified by a database number, and file number. In Natural systems, database and file numbers are defined in the DDM. The name is an optional field which you can use to help identify the partitioned file. If you provide a name, it must be unique.
- 3 Partitioning field shows the Adabas short name, format and length of the field used to distribute the data into the separate partitions. You can assign a logical name to this field which is shown instead of the short name, format and length.
- 4 Enter one of the following options in the C column to select an entry:

d	display
m	modify
p	purge
c	copy
e	expand

Add (Define) a Partitioned File

▶ **To add a partitioned file**

- 1 1. Press PF10 from the Maintain Partitioned Files screen to display the Add Partitioned File screen.

```

8:53:56      ***** A D A B A S   VISTA SERVICES 8.2.1 *****      2011-02-28
              - Add Partitioned File -                               V11P10M1

Source ... Database: 11____ File: 1____ Name: TESTFL1_ (optional)
              Type: S   standard

Partitioning Criteria .. Field Name ..... AA   (from
                        Format ... A           Adabas
                        Length ... 8____      FDT)
                        Display as ..... _____

Options .. Command Limit ..... 0_____ (0=no limit)

Command ==>
Enter-PF1---PF2---PF3---PF4---PF5---PF6---PF7---PF8---PF9---PF10--PF11--PF12---
      Help      Exit      Add   Opt+                               Menu

```

- 2 Refer to section Parameters for detailed information about each input field.
- 3 If PF10 is pressed with the cursor on one of the partitioned files shown on the list screen, source information is taken from that definition. If the cursor is elsewhere on the screen when PF10 is pressed, there is no associated definition that can be used. In either case, new data may be specified in all fields on the screen.
- 4 Enter the source database and file number. An optional name may be defined for the partitioned file to make it easier to identify.
- 5 Enter the Adabas field information for the Partitioning Field.

Refer to the parameter Partitioning Field for more information.

- 6 Specify a command limit, if required.

Press PF6 to modify the default settings.

```

+-----+
| 16:06:59          - Additional Options -          V11110M2 |
|
| Partition ID Assignment..... VISTA
| Maximum number of Partitions.. 255
| ==> Default Partition TOPISN.. 16777215
|
| Enable ISN Positioning..... YES
| User Partition Concurrency.... 8      (max. active CIDs/user)
| Store Control Option..... 1
|
|                                     PF3 Return
+-----+

```

Refer to section Parameters for detailed information about each input field.

- 7 Press PF5 to add the partitioned file definition.
- 8 If you need to make changes to the file definition just added, select it from the list by marking column C with an "m".
- 9 Define the physical partitions that will make up this file.

You have now defined the partitioned file, but you still need to define the physical partitions that will make up the file. You must define at least one physical partition to a partitioned file.

▶ To define a partition

- Select the partitioned file from the list by marking column C with an "e" to "expand" the file and press PF10 to "add" a new partition.

See the sections [List Partitions](#) and [Add Partition](#) for more information.

Display a Partitioned File Definition

▶ To display a partitioned file definition

- Select it from the list by marking column C with a "d".

```

```

- 2 Enter the partition database and file number. You may specify an optional name for the partition to more easily identify it.
- 3 Review the default options supplied and then specify the highest value of the partitioning field that will reside on this partition.

Refer to section Parameters for detailed information about each input field.

- 4 Press PF5 to add the partition and return to the partition list.
- 5 To make changes to the partition just added, select the entry from the list by marking column C with an "m".

Purge a Partition

▶ To purge a partition

- 1 Select it from the list by marking column C with a "p".

```
+-----+
! 09:45:47      Purge Partition      V11P60M2  !
!
! Name: PART0001 Database: 110      File: 16    !
!
!              PF3 Exit      PF5 Confirm      !
!
+-----+
```

- 2 Press PF5 to confirm the purge request.

File Translation

A number of simple steps are needed to perform configuration changes and to make the changes available to Adabas Vista enabled jobs.

For example, the steps involved in making a Translation File configuration change are as follows:

- Select the File Translation maintenance option
- Select (Expand) the generation of rules for which you wish to make the change (Add new generation if appropriate)
- Select (Expand) the generation delta in which you wish to make the change (Add new generation delta if appropriate)
- Select (Expand) the page in which you wish to make the change (Add new page if appropriate)
- Make the configuration change required
- Apply the generation delta to the base generation.
- Activate the generation (only required if the generation is not the active one)

Refer to the following sections for more information about each of these steps.

- [Generation Maintenance](#)
- [Generation Delta Maintenance](#)
- [File Translation Page Maintenance](#)
- [Translation Rule Maintenance](#)

- Site Policies for Target Categories

Generation Maintenance

- List Generations
- Add Generation
- Browse Generation Configuration
- Activate Generation
- Expand Generation for Generation Delta Maintenance
- Display/Modify Generation
- Purge Generation
- Copy Generation

List Generations

▶ To list the available generations

- 1 Select service 1 from the Maintenance menu or enter the command 1.1 on a command line.

```

11:35:14      ***** A D A B A S   VISTA SERVICES 8.2.1 *****      2006-05-29
                - Maintain Generations -                          V11200M1

C Generation Created          Activated          Status
_ *STARTUP 2006-03-27 16:11:07 2006-03-27 16:11:07 Active

Mark with (B)rowse base generation,(A)ctivate,(E)xpand change deltas,
(D)isplay,(M)odify,(P)urge,(C)opy

End of List
Command ==>
Enter-PF1---PF2---PF3---PF4---PF5---PF6---PF7---PF8---PF9---PF10--PF11--PF12---
      Help      Exit  Refr                                Add      Menu

```

- 2 Each generation is uniquely identified by an alphanumeric name of length 8 characters.

The date the generation was created and the date when the generation was last activated are shown on the list screen. A generation status is also shown. This may be Active, Inactive or Purge-deferred.

Adabas Vista runtime only executes against the Active generation.

- 3 Enter one of the following options in the C column to select an entry:

b	browse generation configuration
a	activate generation
e	expand generation for generation delta maintenance
d	display generation information
m	modify generation information
p	purge generation (and all rules)
c	copy generation (and all rules)

Note: The very first time you select the maintenance service from the main menu, Adabas Vista will determine if any generations are already defined. If so, these generation names will be inherited. If not, the generation name *STARTUP will be assigned to the initial generation created by the conversion of existing rules or by the initialization of a new configuration file.

Add Generation

▶ To add a generation

- 1 Press PF10 from the Maintain Generations screen.

Browse Generation Configuration

▶ To browse a generation's configuration

- Select it from the list by marking column C with a "b".

```

16:08:19      ***** A D A B A S   VISTA SERVICES 8.2.1 *****           2006-04-12
                                     - Maintain Pages -                       V11T00M1
                                     Generation: CFG00001 Status: Inactive
Reposition to page: _____ Delta: DELTA001
C Page Name      Description
_ *site
_ PAGE0001
_ PAGE0002
_ PAGE0003
_ PAGE0004
_ PAGE0005
_ PAGE0006
_ PAGE0007
_ PAGE0008

Mark with (D)isplay,(M)odify,(P)urge,(C)opy,(E)xpand
nd of List
Command ==>
nter-PF1---PF2---PF3---PF4---PF5---PF6---PF7---PF8---PF9---PF10--PF11--PF12---
      Help      Exit Refr                               Add Site Menu

```

The translation rule pages are listed. These are the rules that are actually in effect at runtime, if this is the active generation. The pages and rules may only be browsed. See [Expand Generation Delta](#) for more information on how to navigate the page and rule maintenance screens.

Activate Generation

▶ To activate a generation

- 1 Select it from the list by marking column C with an "a".

```
13:04:26          Activate Generation Configuration          V11260M1

Activate Generation: CFG00001

WARNING
On confirmation of this activation request, any newly started job
running with this configuration file will use the newly activated
configuration.

Any existing Active generation will be set to Inactive

                PF3 Exit      PF5 Confirm
```

- 2 Press PF5 to confirm activation.

The currently active generation will become Inactive.

Note: The newly activated generation becomes immediately available for use by all sessions. Sessions that exist at the time the new generation is activated will only acknowledge the new generation when they reach a situation where there are no outstanding cursors (CIDs) and transactions because it is impossible to alter a target file (etc.) in the middle of these activities.

Expand Generation for Generation Delta Maintenance

▶ To expand a generation for generation delta maintenance

- Select it from the list by marking column C with an “e”.

Refer to [Generation Delta Maintenance](#).

Display/Modify Generation

▶ To display/modify a generation

- 1 Select it from the list by marking column C with a “d” or “m” as appropriate (example below is for modify).

```
12:36:22      ***** A D A B A S   VISTA SERVICES 8.2.1 *****      2006-04-12
              - Modify Generation -                               V11230M1

Status: Inactive          Last Modified: 2006-04-12 at 12:23:15 by UKGXN
                          Created: 2006-04-12 at 12:23:15 by UKGXN

Generation: CFG00001
Last Activated:

Description:
CONFIGURATION CHANGE FOR ACCOUNTS DEPARTMENT - CHANGE NUMBER ACC/03/21A.
_____  
_____  
_____  
_____  
_____  
_____  
_____  
_____  
_____  
_____

Command ==>
Enter-PF1---PF2---PF3---PF4---PF5---PF6---PF7---PF8---PF9---PF10--PF11--PF12---
      Help      Exit      Upd                               Menu
```

2 Make any necessary modifications and press PF5 to confirm (modify only).

You may not modify the automatically created generation *STARTUP.

Purge Generation

▶ **To purge a generation**

1 Select it from the list by marking column C with a “p”.

```
13:26:31                Purge Generation Data                V11240M1
Purge all data for Generation: CFG00001
Mark
  _ Run Purge process now
  _ Defer Purge process
PF3 Exit    PF5 Confirm
```

- 2 There are two options for purge generation; the first will perform an immediate purge, the second allows the purge to be deferred (generation status is set to 'purge deferred').
- 3 Press PF5 to confirm the purge request.

For generations with large numbers of Partitioned and Translation files, it may be preferable to use the purge deferred option to indicate the intention to purge and then to actually perform the purge at an appropriate time. This is due to the amount of configuration file activity necessary to purge large numbers of Partitioned and Translation files.

Once a generation is in 'purge deferred' status, the only way to recover maintainability to it is to perform a copy to a new generation name.

Copy Generation

▶ To copy a generation

- 1 Select it from the list by marking column C with a "c".

```
13:50:10          Copy Generation Data          V11250M1
Copy all data for Generation: CFG00001
          to Generation: _____
          PF3 Exit    PF5 Confirm
```

- 2 Define a new generation name of your choice.
- 3 Press PF5 to confirm the copy request.
- 4 A new generation description may be provided by using the modify option.

The newly copied generation is always created with a status of Inactive.

After the copy, the configuration content of the newly created generation will consist of:

- A copy of any base generation Partitioned Files
- A copy of any base generation Translation Files
- A copy of any base generation Target Categories
- A copy of any generation deltas and their configuration changes

Generation Delta Maintenance

- [Delta Locking](#)
- [List Generation Deltas](#)
- [Add Generation Delta](#)
- [Display/Modify Generation Delta](#)
- [Purge Generation Delta](#)
- [Copy Generation Delta](#)
- [Apply Generation Delta](#)

- Expand Generation Delta

Delta Locking

To prevent inconsistent modifications in a delta, Adabas Vista implements a delta locking mechanism based on the Natural *USER system variable. You may only make modifications in a delta, or apply or purge the delta if either:

- the delta is not currently locked, or
- the delta is locked by you. That is, the delta owner matches the current value of *USER.

If you attempt to apply, purge or make modifications in a delta locked by someone else, the following warning appears

```

+-----+
| 17:31:21          Delta Lock Details          2008-05-22 |
|                                                    VIDELOM1 |
|
| Delta DELTA001 was locked by UKSJU    at 17:27:58 on |
| 2008-05-22 in job/transaction NAT42    with comment: |
| PAYROLL CHANGE IN PROGRESS - CHANGE ACC/03/21A      |
|
| You cannot make any modifications in this delta unless you |
| reset the lock by marking: _ and pressing PF5.          |
| Optional comment when resetting the lock:                |
| _____                                                |
|
| Warning: Do not reset the lock unless you are sure that the |
| other party has failed to release it or is in full         |
| agreement that their ownership is to be transferred.      |
| Otherwise, unpredictable results will occur.              |
|
|                    PF3 Exit    PF5 Reset                  |
+-----+

```

This screen shows information about who locked the delta and when. It also shows the comment entered by that user when they locked the delta. If necessary, you can take ownership of the delta by marking the indicated field, entering an optional comment and pressing PF5. This must only be done when the other party is known to have permanently given up their existing lock otherwise unpredictable results will occur.

For example:

```
+-----+
| 17:33:11          Delta Lock Details          2008-05-22 |
|                                           V1DELOM1 |
|
| Delta DELTA001 was locked by UKSJU   at 17:27:58 on
| 2008-05-22 in job/transaction NAT31   with comment:
| PAYROLL CHANGE IN PROGRESS - CHANGE ACC/03/21A
|
| You cannot make any modifications in this delta unless you
| reset the lock by marking: X and pressing PF5.
| Optional comment when resetting the lock:
| TAKE OVER PAYROLL CHANGE ACC/03/21A_____
|
| Warning: Do not reset the lock unless you are sure that the
| other party has failed to release it or is in full
| agreement that their ownership is to be transferred.
| Otherwise, unpredictable results will occur.
|
|                               PF3 Exit   PF5 Reset
+-----+
```

You can now make the necessary changes in this delta.

When you exit maintenance the following screen appears:

```
+-----+
| 17:43:16          Delta Lock Details          2008-05-22 |
|                                           V1DELOM2 |
|
| Delta DELTA001 was locked by you at 17:39:42 on 2008-05-22
| in job/transaction NAT42
| Enter Y to retain the lock or N to release it: _ and press
| PF5 to confirm.
| If you retain the lock, only you can modify the delta. If
| you release the lock, the delta is available for someone
| else to make modifications in it.
| Optional comment (when retaining the lock):
| CONTINUE PAYROLL CHANGE ACC/03/21A_____
|
|                               PF5 Confirm
+-----+
```

This screen allows you to choose between:

- retaining the lock, so that no-one else can apply, purge or make modifications in the delta without resetting the lock, as above
- releasing the lock, so that the delta is available for anyone else to apply, purge or modify

List Generation Deltas

▶ To list the available generation deltas

- 1 Select it from the Generation Maintenance list by marking column C with an “e”.

```

14:11:07      ***** A D A B A S   VISTA SERVICES 8.2.1 *****      2006-04-12

Delta: DELTA001

Description:
PAYROLL CHANGE IN PROGRESS          - CHANGE NUMBER ACC/03/21A.

_____
_____
_____
_____
_____
_____
_____

Command ==>
Enter-PF1---PF2---PF3---PF4---PF5---PF6---PF7---PF8---PF9---PF10--PF11--PF12---
      Help      Exit      Upd                               Menu

```

- 2 Make any necessary modifications and press PF5 to confirm (modify only).

Purge Generation Delta

▶ **To purge a generation delta**

- 1 Select it from the list by marking column C with a “p”.

```
14:52:02                Purge Generation Delta                V11274M1

Purge Delta DELTA001 of Generation: CFG00001

All modifications contained in this delta will also be purged.

If this is the last delta for this generation, any outstanding changes to
target policy will be discarded too.

                                PF3 Exit    PF5 Confirm
```

- 2 Press PF5 to confirm the purge request.

If you are purging the last generation delta for a particular generation then any changes made to Target Categories and their policies will be purged too.

Copy Generation Delta

▶ **To copy a generation delta**

- 1 Select it from the list by marking column C with a “c”.

```
14:58:09                Copy Generation Delta                V11275M1

Copy from Delta DELTA001 of Generation: CFG00001
to Delta _____

All modifications contained in this delta will also be copied

                                PF3 Exit    PF5 Confirm
```

- 2 Define a new generation delta name of your choice.
- 3 Press PF5 to confirm the copy request.
- 4 A new generation delta description may be provided by using the modify option.

Apply Generation Delta

▶ To apply a generation delta to the base generation

- 1 Select it from the list by marking column C with an “a”.

```
15:00:27          Apply Generation Delta          V11276M1
Apply Delta DELTA001 to Generation: CFG00001
Mark _ to retain the Delta

                PF3 Exit    PF5 Confirm
```

- 2 Press PF5 to confirm application.

The configuration changes in this generation delta will be applied to the base generation. An option is available for the generation delta to be retained instead of deleted (the default).

Note: If the affected base generation is the currently active generation, the modified active generation becomes immediately available for use by all sessions. Sessions that exist at the time the generation is modified will only acknowledge the modifications when they reach a situation where there are no outstanding cursors (CIDs) and transactions because it is impossible to alter a target file (etc.) in the middle of these activities.

Expand Generation Delta

► **To expand a generation delta for rule maintenance**

- 1 Select it from the list by marking column C with an “e”.

```

This lists the available file translation pages.

Each file translation page is uniquely identified by an alphanumeric name of length 8 characters.

- 2 Enter one of the following options in the C column to select an entry:

d	display file translation page
m	modify file translation page
p	purge file translation page (and all rules within)
c	copy file translation page (and all rules within)
e	expand file translation page for rule maintenance

Note: The page list displays the pages defined to the base generation in addition to any new pages added to the current generation delta. Changes staged in the current generation delta are highlighted.

PF11 is used to access the [Site Policies for Target Categories](#) maintenance screen.

File Translation Page Maintenance

- [Add File Translation Page](#)
- [Display/Modify File Translation Page](#)
- [Purge File Translation Page](#)
- [Copy File Translation Page](#)
- [Expand File Translation Page](#)

Add File Translation Page

▶ To add a file translation page

- 1 Press PF10 from the Maintain File Translation Pages screen.

```

16:09:16      ***** A D A B A S   VISTA SERVICES 8.2.1 *****      2006-04-12
                                     - Add Page -                      V11T10M1
                                               Generation: CFG00001 Status: Inactive
                                               Delta: DELTA001

Specify Page Name: PAGE0009

Description: _____

Command ==>
Enter-PF1---PF2---PF3---PF4---PF5---PF6---PF7---PF8---PF9---PF10--PF11--PF12---
      Help      Exit      Add                               Menu

```

- 2 Define a page name of your choice. An optional description may be given.

Any number of pages can be defined. In order to make translation file rules available to Adabas Vista enabled jobs, the client runtime controls for those jobs must specify the appropriate page name(s) within which are the required translation file rules to be effective for each job. For those translation file rules that are required for all Adabas Vista enabled jobs then a mandatory page can be defined. This page is called '*site' and is always checked at runtime.

If no *site page is defined the add screen above has an extra line as follows:

```
Specify Page Name: _____  
or mark here: _ in order to establish a system-wide mandatory page
```

- 3 Press PF5 to add the page and return control to the maintenance list.

C	Page Name	Description
_	*site	
_	PAGE0001	
_	PAGE0002	
_	PAGE0003	
_	PAGE0004	
_	PAGE0005	
_	PAGE0006	
_	PAGE0007	
_	PAGE0008	
_	PAGE0009	

Note: The newly added PAGE0009 is highlighted to indicate that this page is currently staged in the current generation delta.

Display/Modify File Translation Page

▶ To display/modify a file translation page

Translation Rules

A *translation rule* is used by Adabas Vista to re-direct a command issued against a source file to a target file. The source file is identified by a source database and file number.

- The source database and file number identifies the file to the application. In Natural systems, this is the database and file number defined in the DDM.
- The target database and file number indicate where a qualified command is to be directed.

Translation rules are defined within pages. Within each page a source file can have a number of different targets, one for each defined Target Category. Refer to [Target Categories](#) for more information.

List Translation Rules

▶ To display a list of translation rules

- 1 Select it from the File Translation Page list by marking column C with an “e”.

```

17:06:40      ***** A D A B A S   VISTA SERVICES 8.2.1 *****           2006-04-12
              - Maintain Translation Rules -                               V11T60M1
Page Name: PAGE0009                               Generation: CFG00001 Status: Inactive
Reposition: Database: _____ File: _____                        Delta: DELTA001
  Database/File      Translated database/file (or redirect)...

2 Enter one of the following options in the C column to select a translation rule:

d	display
m	modify
p	purge
c	copy

Add a Translation Rule

▶ To add a new translation rule

1 Press PF10 from the Maintain Translation Rules screen to display the Add Translate Rule screen.

```

17:13:05      ***** A D A B A S   VISTA SERVICES 8.2.1 *****      2006-04-12
                - Add Translation Rule -                               V11T61M1
Page Name: PAGE0009                               Generation: CFG00001 Status: Inactive
                                                Delta: DELTA001

Source ... Database: 1____ File: 0____

          Mandatory/ <-- Target Information ---> Or      Command      User
          Priority   Database File (or Redirect) None    limit         Info
TEST     N  0____   2____  0____  _____  -    0____        _____
QA       _  0____   _____ 0____  _____  -    0____        _____
PRE-PROD _  0____   _____ 0____  _____  -    0____        _____
PROD     _  0____   _____ 0____  _____  -    0____        _____

Command ==>
Enter-PF1---PF2---PF3---PF4---PF5---PF6---PF7---PF8---PF9---PF10--PF11--PF12---
      Help      Exit      Add                               Menu

```

- 2 Enter the source database and file number and, for each target category (as required), the target database and file number.

A source and target file number of zero indicates that the translation rule applies to all files for the source database number. If such a rule exists and a rule also exists for a specific file with the same source database number, then the file rule will override the "all-files" rule.

In the example screen, any Adabas Vista enabled job with PAGE0009 defined in its runtime controls and running with a Target Category of TEST will cause any access to database 1 to be translated to database 2.

Refer to Translation Parameters for more information on the available options.

- 3 Press PF5 to add the translation rule definition.
- 4 To make changes to the rule just added, select the rule from the list by marking column C with an "m".

Display/Modify a Translation Rule

▶ **To display/modify a file translation rule**

- 1 Select it from the list by marking column C with a "d" or "m" as appropriate (example below is for modify).

```

17:19:34      ***** A D A B A S   VISTA SERVICES 8.2.1 *****      2006-04-12

Description :
Command limit: 0_____ (0=no limit)
Category adjustment policy (mark one only):
    X allow a rule in a page to change (redirect) category
      (default is 'yes', only the first replacement during the page
      merge is taken)
    _ reject with response 249, subcode 107
First-level null definition policy (mark one only):
    X allow calls for which no rules exist (default)
    _ reject with response 249, subcode 106 at end of page-merge
    _ use the rule from category _____
Second-level null definition policy (mark one only):
    X allow calls for which no rules exist (default)
    _ reject with response 249, subcode 108 at end of page-merge

Command ==>
Enter-PF1---PF2---PF3---PF4---PF5---PF6---PF7---PF8---PF9---PF10--PF11--PF12---
      Help      Exit      Upd                               Menu

```

- 2 Press PF5 to confirm any modifications. (only for modify).
- 3 Refer to Target Category Parameters for more information on the available options.

Purge a Target Category

▶ To purge a target category

- 1 Select it from the list by marking column C with a "p".

```
18:15:01          Purge Target Category          V11C40M1

Target Category: PRE-PROD

Purging a target category causes all translation rules in all
modification deltas for the current generation to be updated.
This may be a long-running process. You are strongly advised to add
or purge target categories for the generation before making any
changes to its translation rules.

PF3 Exit      PF5 Confirm
```

- 2 Press PF5 to confirm the purge request.

Client Runtime Controls

An Adabas Vista job is uniquely identified by a job type and job name. Runtime controls are defined to influence the job's operation.

Note: Adabas Vista can be installed in all client jobs, but will remain inactive until a Vista runtime control is defined for the job. This enables an installation to deploy Vista in advance of their actual use in a job. It also enables the use of a common library set between jobs that use Vista and those that do not.

Note: See section Parameters for a complete description of all runtime controls.

- [Maintain Client Runtime Controls](#)
- [Maintain Client Runtime Control Overrides](#)

Maintain Client Runtime Controls

▶ To display a list of client runtime controls

- 1 Select service 2 from the Maintenance menu or enter the command 1.2 on the command line.

Command ==>
Enter-PF1---PF2---PF3---PF4---PF5---PF6---PF7---PF8---PF9---PF10--PF11--PF12---
      Help      Exit  Refr              Add  Prods Menu
    
```

- 2 This screen lists the runtime controls that have been defined for all Adabas Add-on products that share the same configuration file and indicates which job has runtime controls defined for which product.
- 3 To position within the list, enter the job type and name in the fields in the top right area of the screen.
- 4 PF11 allows you to maintain the runtime controls for any product from any product's online system.
- 5 Enter one of the following options in the C column to select an entry

d	display
w	expand
m	modify
p	purge
r	rename
c	copy
o	overrides
i	site information

- Add a Runtime Control
- Display/Modify Runtime Control
- Expand Runtime Control
- Purge a Runtime Control
- Rename a Runtime Control
- Copy a Runtime Control
- Maintain Site Information

Add a Runtime Control

▶ To add a new runtime control

- 1 Press PF10 from the Client Runtime Controls screen.

```

14:36:48      ***** A D A B A S      VISTA SERVICES 8.2.1 (I004) *****      2008-05-22
              - Add Client Runtime Control -                               U11310M1

Select (mark one) :
                _ Batch
                _ COM-LETE
                _ CICS (DTR - Dynamic transaction routing)
                _ CICS (Standard)
                _ IMS (DTR)
                _ UTM (DTR)
                _ TSO
                _ CMS
                _ TIAM
                _ more choices for type or

                _ API controlled - type 1
                _ API controlled - type 2

Command ==>
Enter-PF1---PF2---PF3---PF4---PF5---PF6---PF7---PF8---PF9---PF10--PF11--PF12---
      Help           Exit                                           Menu

```

- 2 Mark the type of job required.

Each different job type has a different characteristic: it is important to select the correct type.

Note: Select the job type "CICS (Standard)" if CICS/MRO is to be used without dynamic transaction routing or for other CICS environments. Select the job type "CICS (DTR – Dynamic Transaction Routing)" if CICS/MRO is to be used with dynamic transaction routing.

- If you mark the selection "more choices for type", another selection window will appear with additional job types. If you need to use any of these, contact Software AG for advice.

If you mark either of the API controlled types, you can define a set of runtime controls which can be activated dynamically by API. You must enable API overrides for any job where you want to use this API definition and name it in the job's list of permissible APIs.

Note: Dynamically activated API runtime controls are not yet available.

- After selecting a job type, press Enter.

```

11:14:14      ***** A D A B A S   VISTA SERVICES 8.2.1 *****      2007-02-13
                - Add Client Runtime Control -                        U11310M3

Type: Batch
Name: VI81J009 (* for default controls for this type)

This is a standard type of runtime.

Command ==>
Enter-PF1---PF2---PF3---PF4---PF5---PF6---PF7---PF8---PF9---PF10--PF11--PF12---
      Help      Exit      Add                               Menu
    
```

- Enter a job name in the resulting screen.

It is possible to enter one or more asterisks (*) to indicate a wild card. For example, the runtime control with the name CICS**PR is found by any job with the name CICS in positions 1-4 and PR in positions 7-8, no matter what the characters are in positions 5-6. If an asterisk (*) is the last character in a job name, the remainder of positions in the name through the eighth are padded with asterisks.

The initial runtime control values set up for the new job are copied from those specified in the *DEFAULT entry for the selected job type.

If no default entry exists for the job type, then Adabas Vista product default values are used.

Runtime controls are always matched on type. The order of search within type is

1. Match on exact job name.
2. Match on wild card definitions.
3. Use the default for the job type, if one has been defined.

Note that the number of wild card job names defined for a job type has a direct effect on the number of Adabas commands needed to establish the runtime controls at initialization. This is particularly relevant to batch jobs that process relatively few Adabas commands.

- 6 To create a default runtime control, select the appropriate job type and enter a "*" as the name.

Note: A specific job runtime control overrides any default runtime control for the same job type.

- 7 Use PF5 to continue.

```

11:24:12      ***** A D A B A S   VISTA SERVICES 8.2.1 *****      2007-02-13
              - System Coordinator Runtime Controls -                U11310M5
              Operation mode (mark one):

```

- 10 These runtime controls are pulled from the *DEFAULT entry for the selected job type - if such an entry doesn't exist, the product default values are used.
- 11 Use PF9 for an additional controls screen and to define the file translation pages to be referenced by this job:

```

11:17:54   ***** A D A B A S   VISTA SERVICES 8.2.1 (I008) *****   2009-01-15
           - Adabas Vista Runtime Controls -                               U1133VMP
Type: Batch
Name: VI81J009                               Last modified 2008-07-16 at 13:24:09 by UKGXN
                                           Added 2005-10-05 at 15:49:49 by UKGXN
Mode: *DEFAULT

Permissible pages for this runtime, in order of preference:

*site      _____  _____  _____  _____
           _____  _____  _____  _____

Convergence processing controls:
  CL commands (mark one) X Dilute to RC on demand (default)
                        _ Only honor when ETID is used
                        _ Always honor
                        _ Only reject when ETID is used
                        _ Always reject (RSP249/22)

                                PF3 Return   PF9 Check

```

- 12 You now need to define the mode (or Target Category) under which this job will run and any file translation pages which must be referenced for its correct operation.
- 13 If a *site page exists, then all jobs will automatically reference this file translation page. The existence of this page is identified by “*site” displayed on the screen.
- 14 If this job needs to also reference other file translation pages for correct operation, these pages should be specified here. The order they are defined in is the search order used by Adabas Vista to resolve any source files to their appropriate translation targets.
- 15 PF9 provides an optional check facility if you wish to confirm that the pages you define here actually do exist. In addition, at runtime, a policy can be defined in order to control Adabas Vista’s runtime processing if it determines that a defined page does not exist.
- 16 For more information refer to the Pages runtime control.
- 17 Use PF3 to return to the main runtime controls screen and use PF5 to complete the process.

Display/Modify Runtime Control

▶ to display/modify a runtime control

- 1 Select it from the list by marking column C with a “d” or “m” as appropriate (example below is for modify).

```

11:40:15      ***** A D A B A S   VISTA SERVICES 8.2.1 *****      2007-02-13

AVILOOK

▪ Enabling AVILOOK	82
▪ SYSAVI – Selecting AVILOOK	82
▪ SYSAVI – Using AVILOOK	83

The command analysis sampler (AVILOOK) can be used to determine those files which may benefit from Adabas Vista's Partitioning option by reporting on the command constructs used to access the file.

The sampler is controlled and viewed online using SYSAVI and, in addition, prints the results at normal database termination.

Note: For those Adabas customers who do not have an Adabas Vista license, the AVILOOK sampler along with a demo version of SYSAVI is distributed as part of the Adabas release tape.

Enabling AVILOOK

AVILOOK is enabled using the following ADARUN command:

```
ADARUN VISTA=YES
```

SYSAVI – Selecting AVILOOK

▶ To select AVILOOK

- Selecting service 4 from the SYSAVI main menu displays the AVILOOK menu options:

```
+-----+
|                                     |
|          Code   Service             |
|          ----   - - - - -          |

|           .    Exit                 |
|          ----   - - - - -          |
|          Code..: _                  |
|                                     |
|          Database ID..: _____ Nuc ID..: _____ |
|                                     |
|          System Coordinator Node.: _____ |
|                                     |
+-----+
```

SYSAVI – Using AVILOOK

This section describes how to use AVILOOK.

- [AVILOOK File Maintenance](#)
- [AVILOOK File Statistics](#)
- [AVILOOK Add Files](#)

AVILOOK File Maintenance

The File Maintenance screen lists the files that are already defined to AVILOOK for a specified database number. The database name is also displayed.

▶ To display the File Maintenance screen from the AVILOOK menu

- 1 Select service option 1.
- 2 Specify the Adabas database number for the database for which you wish to run AVILOOK.

The database must be running with the `ADARUN VISTA=YES` parameter.

- 3 (Optional) For a cluster database, specify a Nucleus ID.

If the database number you specify is a cluster database, you have the option to specify the Nucleus ID of the cluster nucleus you wish to monitor.

```

+-----+
| 13:31:07   Select Cluster Members  2006-04-20 |
|                                         V1NUCSM1 |
| DBID:   231 |
|          |
|  C   Nuc  C   Nuc  C   Nuc  C   Nuc |
|  _   1  _   2 |
|          |
| Mark to select |
| Command ==>   |
|                PF3 Exit   PF4 Refr |
+-----+

```

You may select the appropriate nucleus from this list.

If you choose not to specify a Nucleus ID or you specify a value of 0, you are required to specify the Node ID of the local Adabas System Coordinator. A window is displayed listing the nuclei that are currently active in the cluster.

If the job within which you are using SYSAVI is defined to a System Coordinator group, the Node ID of the local System Coordinator is automatically set up.

```
DBID: 231      (TEST-V7-DB)
C   File      Command Limit      Commands      Started      Status
-   12        0                    0             2006-04-20 09:09:20 Paused
-   2         0                    5768          2006-04-20 09:09:20 Active

Mark with (A)ctivate,(P)ause,(R)eset,(S)tatistics,(X)Delete
Command ==>
```

Press PF4 to refresh the command count.

▶ To select a file entry

- Enter one of the following options in column C next to the file to be selected:

a	activate; start gathering statistics
p	pause; stop gathering statistics
r	reset statistics to zero
s	display the current statistics for the file
x	delete the file from the file list

AVILOOK File Statistics

▶ To display the File Statistics screen from the AVILOOK menu

- Enter option “s” in column C next to the file entry:

```
DBID: 231      (TEST-V7-DB)
File: 2
                                         Started: 2006-04-20 09:09:20
                                         Paused :

      CC   Desc   Command Count      CC   Desc   Command Count
      L3   AA     2836              L3   BC     24
      S1   AB     1324              L9   S1     26
      L3   BC     24
      L9   S1     26

Other Commands not listed above: 1558

Command ==>
```

This screen shows statistics on the command constructs used to access the file (for example, S1, L3 and L9 commands). The statistics are displayed in descending order by command code (CC) and Adabas two-character field name (Desc).

In this example, there are 2836 accesses to file 2 using an L3 command with the Adabas field AA as the primary sequence field. Such a file, where the predominant access is by a single key, may benefit from being partitioned using the Adabas field AA as the Adabas Vista partitioning field.

AVILOOK Add Files

▶ To add a new AVILOOK file

- 1 Press PF10 from the AVILOOK File Maintenance screen.

```

+-----+
| 08:11:07          AVILOOK Add File          2006-04-20 |
|                                     V14100M2 |
|                                     |
|      File _____  Status (A/P) P      (Active/Paused) |
|                                     Command Limit 0      (0=No Limit) |
|                                     |
|                                     PF3 Exit   PF5 Update |
+-----+

```

- 2 Enter the file number.
- 3 Indicate whether you want AVILOOK to start gathering statistics immediately (Active status) or you want to define the file now and activate it at a later time (Pause status).
- 4 (Optional) Predefine the maximum number of commands the active file can process before it automatically reverts to pause status.
- 5 Press PF5 to add the file.

Note: Files defined (and activated) are only sampled for the duration of the current database session.
