

%G - Set Playback Mode for a Recording

A recording can be played back in two modes:

- **Background Mode**

In background mode, the entire recording is played back invisibly; that is, all the actions of the recording are carried out without anything being displayed to you on the terminal screen during the execution of the recording. Neither can you interrupt a recording that is played back in background mode (unless the recording contains the terminal command %R).

- **Step Mode**

In step mode, a recording is played back step by step, and all actions are displayed to you. By pressing ENTER you proceed from one step to the next. In step mode, it is also possible for you to interrupt the recording by pressing the CLEAR key.

By default, a recording is played back in background mode.

Command	Function
%GON	With this command, you switch step mode on.
%GOFF	With this command, you switch back to background mode.
%G	With this command, you can toggle between the two modes.

Further information on recording is provided in the section *Natural Recording Utility* in the *Utilities* documentation.

Application Programming Interface: USR0350N. See *SYSEXT - Natural Application Programming Interfaces* in the *Utilities* documentation.
