

DDM Services

DDM Services are used to create, maintain and delete Natural data definition modules (DDMs).

The *DDM Services* documentation is organized in the following parts:

- Principles of Operation
- Invoking and Terminating DDM Services
- Using DDM Maintenance Functions
- Listing DDMs
- Creating DDMs
- Invoking and Terminating the DDM Editor
- Using the DDM Editor Screen
- Saving and Cataloging a DDM
- Maintaining DDMs in Different Environments
- Data Conversion for Adabas or RDBMS
- Data Conversion for Tamino
