

%FM - Numeric Edit Mask Free Mode

This command is used to activate/deactivate edit mask free mode, a special capability to allow literals to be omitted during input into a field with a numeric edit mask.

Command	Function
%FM-	With this command, you switch edit mask free mode off.
%FM+	With this command, you switch edit mask free mode on.

The default setting at session startup is provided with profile parameter EMFM.

See the INPUT statement (in the *Statements* documentation) for additional information on the edit mask free mode.
