Document Conventions

Convention	Description
Bold	Identifies elements on a screen.
Monospace font	Identifies service names and locations in the format folder.subfolder.service, APIs, Java classes, methods, properties.
Italic	Identifies: Variables for which you must supply values specific to your own situation or environment. New terms the first time they occur in the text.
	References to other documentation sources.
Monospace font	Identifies: Text you must type in. Messages displayed by the system. Program code.
{}	Indicates a set of choices from which you must choose one. Type only the information inside the curly braces. Do not type the { } symbols.
1	Separates two mutually exclusive choices in a syntax line. Type one of these choices. Do not type the symbol.
[]	Indicates one or more options. Type only the information inside the square brackets. Do not type the [] symbols.
	Indicates that you can type multiple options of the same type. Type only the information. Do not type the ellipsis ().

Online Information and Support

Software AG Documentation Website

You can find documentation on the Software AG Documentation website at http://documentation.softwareag.com. The site requires credentials for Software AG's Product Support site Empower. If you do not have Empower credentials, you must use the TECHcommunity website.

Software AG Empower Product Support Website

If you do not yet have an account for Empower, send an email to empower@softwareag.com with your name, company, and company email address and request an account.

Once you have an account, you can open Support Incidents online via the eService section of Empower at https://empower.softwareag.com/.

You can find product information on the Software AG Empower Product Support website at https://empower.softwareag.com.

To submit feature/enhancement requests, get information about product availability, and download products, go to **Products**.

To get information about fixes and to read early warnings, technical papers, and knowledge base articles, go to the **Knowledge Center**.

If you have any questions, you can find a local or toll-free number for your country in our Global Support Contact Directory at https://empower.softwareag.com/public_directory.asp and give us a call.

Software AG TECH community

You can find documentation and other technical information on the Software AG TECH community website at http://techcommunity.softwareag.com. You can:

- Access product documentation, if you have TECHcommunity credentials. If you do not, you will need to register and specify "Documentation" as an area of interest.
- Access articles, code samples, demos, and tutorials.
- Use the online discussion forums, moderated by Software AG professionals, to ask questions, discuss best practices, and learn how other customers are using Software AG technology.
- Link to external websites that discuss open standards and web technology.

Data Protection

Software AG products provide functionality with respect to processing of personal data according to the EU General Data Protection Regulation (GDPR). Where applicable, appropriate steps are documented in the respective administration documentation.

2

Adabas Caching Online Services

Adabas Caching Online Services is used to define caching parameter settings and also to monitor caching operations. It can also be used to issue ADACSH operator commands.

Using ACF Online Services Online Services general use and navigation

Global Level Caching Display/Maintain Global Level Caching Settings

File Level Caching Display/Maintain File Level Caching Settings

3 Using Adabas Caching Online Services

Starting Adabas Caching Online Services	8
Using PF Keys	9

Starting Adabas Caching Online Services

The interactive component that supports Adabas Caching is accessed through the Adabas Online System main menu.

The following screen is displayed when Adabas Caching is not present:

```
**** A D A B A S CACHING FACILITY **** 2004-05-11
13:24:45
                           - Global Cache Main Menu -
                                                                     PCH0002
                                                                     No Cache
                       Code Function
                         D
                               Define RABNs to be Cached
                         M Global Cache Maintenance
O Maintain Cache Spaces
P Maintain Cache Parameters
Cache Session Summary
                              Help
                                Exit
      Code ....._
      Cache Space No .. _
      DataBase ...... 54 (ADANAT-DB)
MENU001: 05- Nucleus running without adacsh
Command ==>
PF1---- PF2---- PF3---- PF4---- PF6---- PF7---- PF8---- PF12----
```

Note the MENU001 message in the lower left quadrant and "No Cache" in the upper right hand quadrant of the screen. "No Cache" will be replaced by "Global Cache" or "File Level" once Adabas Caching has been activated.

To start Adabas Caching Online Services, select Caching Facility from either the demo or full version Adabas Online System main menu.

One of two menus will appear, depending on whether the ADARUN parameter CFILE has been specified:

- If CFILE has *not* been specified, the **Global Cache Main Menu** appears.
- If CFILE has been specified, the **File Level Main Menu** appears.

The memory type depends on the operating system under which Adabas is running. For more information on cache memory types, see section Caching Configuration.

Using PF Keys

PF1 (Help) provides information about the current function, PF3 is Exit and PF12 returns to the main menu.

Other PF keys are used depending on the options activated.

4 Global Caching

     Cache Space No .. __
     DataBase ..... 1955 (WIS1955)
Command ==>
PF1---- PF2----- PF3----- PF4----- PF6---- PF7---- PF8---- PF12----
```

The following function codes are available:

Code	Description
D	Define a new cache space for one or more RABNs
M	Perform global operations on all cache spaces defined for the database
O	Display and modify individual cache spaces defined for the database
P	Display and modify current settings of ADARUN parameters
S	Display summary cache session statistics

Define RABNs to be Cached

Selecting option D from the Global Cache Main Menu displays a menu of functions for defining one or more RABNs to be cached:

14:57:55	****		A S CACHING FACILITY THE RABNS to be Cached -	****	2004-05-11 PCHD002 Global Cache
		Code	Function		4.024. 040
		А	Define Asso Cache		
		D	Define Data Cache		
		?	Help		
		•	Exit		
Code Memory Typ RABN Numbe RABN Numbe Cache Spac Database .	e r From r To e No	·· _ ··	<u></u>		
Command ==>					
	PF3-	PF	- 4 PF6 PF7	- PF8	PF12
Help	Exit				Menu

Field	Description
Code	RABNs may be cached in Associator (option A) and/or Data Storage (option D) space. A separate operation is required for each type of caching.
Memory Type	The memory type can be extended memory (E), data space (D), hiperspace (H), virtual 64 backed by large pages (L), or virtual 64 (V). The choices available depend on the operating system configuration under which Adabas is running. Virtual 64 is only available for systems running z/OS version 1.2 or above on the appropriate hardware. Virtual 64 backed by large pages is only available for systems running z/OS Version 1.9 or above on the appropriate hardware.
RABN Number FromTo	Specifying the start RABN (RABN Number From) and the end RABN (RABN Number To) defines a RABN range to be cached in the defined cache space. If only one RABN is to be cached, it is not necessary to specify an ending RABN number.
Cache Space No	A cache space number (CSN) is a unique number called the RABN Range ID that will be assigned to the new RABN range. Valid values are 0 through 65535. If the number specified is already in use, the new RABN range definition is ignored and an error message is displayed on both DDPRINT and the operator console. If no number is provided or zero is specified, a CSN allocated by the nucleus will be returned.

Field	Description
	Note: Cache Space Number (CSN) is a term retained for compatibility with earlier versions
	of Adabas Caching. However, the CSN now identifies the RABN Range ID to be used as there is no longer a direct correlation between cache spaces and RABN ranges.
	The settings for the cache spaces being defined correspond to those specified by the ADARUN parameters CASSODSP, CASSOEXT, CASSOHSP, CASSOV64; CDATADSP, CDATAEXT, CDATAHSP, and CDATAV64. If a cache space size greater than CASSOMAXS or CDATAMAXS is calculated based on the RABN range specified, you have the opportunity to change the relevant parameter value before the cache space is defined.
	The corresponding direct commands are DEFINE CACHE
	and
	ADD CACHE

Global Cache Maintenance

Selecting option M from the Global Cache Main Menu displays a menu of functions for maintaining cache spaces:

```
A D A B A S CACHING FACILITY *****
15:13:08
                                                            2004-05-11
                      - Global Cache Maintenance -
                                                            PCHM002
                                                            Global Cache
                     Code
                            Function
                      ----
                       D
                             Delete Cache
                            Modify Cache
                       М
                       Ε
                            Enable Cache
                       S
                            Disable Cache
                       ?
                            Help
                            Exit
       Code .....
       Cache Space No .. ALL
       Database ...... 1955 (WIS1955)
Command ==>
PF1---- PF2---- PF3---- PF4---- PF6---- PF7---- PF8---- PF12-----
                 Exit
```

From this screen, global operations can be performed on *all* cache spaces defined for the database. The allowed functions are

D	Delete all cache spaces. Once deleted, spaces must be redefined using Main Menu function D or by restarting the Adabas nucleus with the relevant ADARUN parameters.
M	Move all cache spaces to the memory type (E for extended; D for data space; H for hiperspace; L for virtual 64 backed by large pages; V for virtual 64) you specify on the Memory Type window that appears.
S	Disable all cache spaces.
E	Start cache operation for all cache spaces.

The corresponding direct command is

These same functions can be performed on individual cache spaces using the Maintain Cache Spaces function (menu option O).

Maintain Cache Spaces

Selecting option O from the Global Cache Main Menu displays a list of cache spaces currently allocated for the database:

```
15:16:05 ***** A D A B A S CACHING FACILITY ***** 2004-05-11
                     - Maintain Cache Spaces -
DBID 1955
                                                       PCHS002
                                                       Global Cache
                                Last Activity Stat Error Status
Sel No Mem. Cach RABN Range
       Type Type From To
       ---- ---- ----
     1 EXT ASSO 281 801 2001-09-13 10:43 ALLO
     2 EXT DATA 1 630 2001-09-13 10:42 ALLO
   Select DI(Display) EN(Enable) DS(Disable) DE(Delete) MO(Modify)
PF1---- PF2----- PF3----- PF4----- PF6---- PF7---- PF8---- PF12----
               Exit Refresh
Help
                                                       Menu
```

Note: If you specify the cache space number (CSN) on the Global Cache Main Menu along with function code O, the Cache Statistics screen for that CSN is displayed (DI) directly.

For each RABN range listed on the Maintain Cache Spaces screen, you can display and modify caching parameters by entering one of the following commands in the Select column:

Cmd	Action
MO	Move the selected cache space to the memory type (E for extended; D for data space; H for hiperspace; L for virtual 64 backed by large pages; V for virtual 64) you specify on the Memory Type window that appears.
DE	Delete the selected cache space. Once deleted, the space must be redefined using the Main Menu function D or the relevant ADARUN parameters.
DI	Display the detailed cache space statistics. The information provided is the same as that resulting from the CSTAT operator command.
DS	Disable the selected cache space.
EN	Start caching operation for the selected cache space.

The other columns on the Maintain Cache Spaces display contain the following information:

Column	Description
No.	Cache space number (CSN). This is actually a unique RABN Range ID as there is no longer a direct correlation between cache spaces and RABN ranges.
Memory Type	Caching type for each cache space: extended storage (EXT), data spaces (DS), hiperspaces (HS), virtual 64 backed by large pages (L64) or virtual 64 storage (V64).
Cache Type	Database component being cached in the cache space: Associator (ASSO), Data Storage (DATA), Work part 2 (WRK2), or Work part 3 (WRK3).
RABN Range	The starting (From) and ending (To) RABNs of the RABN range being cached in the cache space.
Last Activity	The date and time the cache space was last accessed.
Status	The current status of the cache space: disabled (DISA); unallocated (UNAL); or ALLC (allocated).
Error Status	If an error condition has occurred, the cause of the error will be displayed in this field.

Cache Statistics

Entering DI in the Select column on the Maintain Cache Spaces screen or selecting option O and specifying a cache number on the Global Cache Main Menu displays the Cache Statistics screen for an individual cache space:

```

File-Level Caching Main Menu

If the ADARUN CFILE parameter has been specified, the File Level Main Menu appears when you select Caching Facility from the main menu:

```
13:59:12
                **** A D A B A S CACHING FACILITY ****
                                                                 2004-05-11
                          - File Level Main Menu -
                                                                 PCF0002
                                                                 File Level

                                                               Menu
                  Exit
```

The following functions are available:

Code	Description
D	Define a new cache space for one or more files
F	Display detailed cache space statistics for a file
M	Enable, disable, or delete caching for one or more files
O	Enable, disable, or delete caching for the Work dataset
P	Display and modify current settings of ADARUN parameters
S	Display summary cache session statistics

Notes:

1. Although it is possible to define different cache spaces for the Associator and Data Storage of a single file using a separate ADARUN CFILE parameter for each, it is not possible to do so using Adabas Online System functions or operator commands. To define both Associator and

- Data Storage caching for a file using Adabas Online System functions or operator commands, you must use the BOTH option that uses the same caching parameters for both.
- 2. Once file level caching has been defined for a file using the ADARUN CFILE parameter, Adabas Online System functions, or operator commands, it is not possible to change the caching parameters without first deleting the defined cache space and then adding a new cache space with the different parameters. For example, if you have Data Storage caching defined for a file and you want to add Associator caching, you must first delete the Data Storage cache space and redefine caching for the file using the BOTH option.

Define File Cache

Selecting option D from the File Level Main Menu displays a menu of functions used to define a new cache space for one or more files:

```
**** A D A B A S CACHING FACILITY *****
13:32:45
                                                             2004-05-11
                         - Define File Cache -
                                                             PCFD002
                                                             File Level
                     Code
                           Function
                            Define Asso Cache
                            Define Asso and Data Cache
                      D
                           Define Data Cache
                      ?
                            Help
                            Exit
    Code ....___
    Memory Type ....._
    File Number ..... 0_
    Class of Service .. _
    Database ...... 1955 (WIS1955)
Command ==>
PF1---- PF2---- PF3---- PF4---- PF6---- PF7---- PF8---- PF12----
Help
                 Exit
                                                           Menu
```

Field	Description
Code	One or more files may be defined for Associator (option A), Data Storage (option D), or both (option B). No RABN ranges need to be specified: RABNs are added automatically. The file number may be any file within the database maximum files value.
Memory Type	The memory type may be extended (E), data space (D), hiperspace (H), virtual 64 backed by large pages (L), or virtual 64 (V), depending on the operating system environment.
File Number	The file or file range for which caching is to be defined.

Field	Description
Class of Service	The class of service. Possible values are:
	■ 1: cache up to 100% of the file
	■ 2: cache up to 75% of the file
	■ 3: cache up to 50% of the file
	■ 4: cache up to 25% of the file
	■ 5: cache up to 10% of the file

Files With Caching

Selecting option F from the File Level Main Menu displays a list of files that use caching:

13:37:48 DBID 1955		***** A D A B A S CA - Files wit		ΤΥ ****	2004-05-11 PCFF002 File Level
Sel Fil	le	File Name	Cache Type	State	2010.
	0 1	Unassigned RABNs EMPLOYEES	Asso/Data	Not accessed Active	
		VEHICLES 3 - 5 not loaded	Asso/Data		
		EXPANDED		Not accessed	
	/	EXPANDED 8 - 9 not loaded	Asso/Data	Not accessed	
	10	TRIGGER-FILE 11 - 18 not loaded	Asso/Data	Not accessed	
	19	CHECKPOINT 20 - 25 not loaded	Asso/Data	Active	
Specify	'DI	' (Display), EN (Enable) DE	(Delete) or	DS (Disable) fo	r a file
Command =	==>				
		PF3 PF4			
НеТр	Кер	os Exit Refr		+ M	enu

Entering DI in the Sel column for a file displays detailed cache space statistics for that file.

The information displayed on the resulting Statistics screen is the same as that provided by the CFSTAT command.

```

       Exit
                                                            Menu
```

This following functions are available:

	D	Delete all cache spaces for a particular file or range of files
E Enable all cache spaces for a particular file or rate		Enable all cache spaces for a particular file or range of files
	S	Disable all cache spaces for a particular file or range of files

Maintain Cache Spaces

Selecting option O from the File Level Main Menu displays the Work cache spaces:

```
**** A D A B A S CACHING FACILITY ****
13:45:34
                                                               2004-05-11
                        - Maintain Cache Spaces -
DBID 1955
                                                               PCHS002
                                                               File Level
Sel No Mem. Cach RABN Range
Type Type From To
                                    Last Activity Stat Error Status
  64001 EXT WRK2 202 211
64002 EXT WRK3 222 2392
                                                      UNAL
                                                      UNAL

Help
                  Exit
                           Refresh
```

For each RABN range listed on the Maintain Cache Spaces screen, you can display caching parameters, modify the memory type, and maintain the cache space by entering one of the following commands in the Select column:

MO	Move the selected cache space to the memory type (E for extended; D for data space; H for hiperspace; L for virtual 64 backed by large pages; V for virtual 64) you specify on the Memory Type window that appears.
DE	Delete the selected cache space. Once deleted, the space must be redefined using the relevant ADARUN parameters.
DI	Display the detailed cache space statistics. The information provided is the same as that resulting from the CSTAT operator command.
DS	Disable the selected cache space.
EN	Enable the selected cache space.

The other columns on the Maintain Cache Spaces display contain the following information:

Column	Description
No.	Cache space number (CSN). This is actually a unique RABN Range ID as there is no longer a direct correlation between cache spaces and RABN ranges.
Memory Type	Caching location for each cache space: extended storage (EXT), data spaces (DS), hiperspaces (HS), virtual 64 backed by large pages (L64), or virtual 64 storage (V64).
Cache Type	Database component being cached in the cache space: Work part 2 (WRK2), or Work part 3 (WRK3).

Column	Description
RABN Range	The starting (From) and ending (To) RABNs of the RABN range being cached in the cache space.
Last Activity	The date and time the cache space was last accessed.
Status	The current status of the cache space: disabled (DISA); unallocated (UNAL); or ALLC (allocated).
Error Status	If an error condition has occurred, the cause of the error will be displayed in this field.

Work Cache Space Statistics

Entering DI in the Select column on the Maintain Cache Spaces screen displays the Cache Statistics screen for an individual Work cache space:

13:47:03 *****	ADABAS CACHI	ING FACILITY ***	** 2004-05-11

```

Note: Values for Max. ASSO Cache Size and Max. DATA Cache Size represent bytes, but may be marked with a K (1 kilobyte=1024 bytes), M (1 megabyte=1,048,576 bytes), or G (1 gigabyte=1,073,741,824 bytes) indicator when the size of the value requires it. In the example screen, the value 1,024,000 may also be designated as 1000 K.

For more information about these parameters, see the section Adabas Caching Parameters.

Cache Session Summary

Selecting option S from the File Level Main Menu displays a summary of information for the Adabas Caching session including cache statistics, read-ahead statistics, and allocation statistics for active and inactive cache spaces. This information is the same as that displayed when the CSUM command is issued.

14:19:37 **** A DBID 1955	D A B A S CACHING - Cache Session S		2004-05-11 PCF0002 File Level
