

CLUGROUPNAME : Cluster Group Name

Parameter	Specify . . .	Possible Values	Default
CLUGROUPNAME	the name of the XCF messaging group in Adabas Cluster Services or the cluster in Adabas Parallel Services	text	none

The CLUGROUPNAME parameter provides

- the XCF group name to be used by the sysplex cluster nuclei for their communication using XCF.
- the name to be used by the Adabas Parallel Services cluster nuclei for their communication.

All nuclei in the same cluster must have the same CLUGROUPNAME. Nuclei belonging to different clusters must have different CLUGROUPNAMEs.

In addition, the CLUGROUPNAME must be different from the XCF group names used by other subsystems that communicate using XCF.

The name can be 1-8 characters long. Valid characters are numeric, uppercase alphabetic, and the special characters \$, @, and #. The name must begin with an alphabetic character (A-Z). IBM names begin with SYS, UNDESIG, or the characters A through I (these characters are not reserved).

Example:

```
ADARUN  PROG=ADANUC,CLUGROUPNAME=SAG1CLU
```
