

# GROUPS : User Group Interprocess Communication

This parameter applies to the BS2000 operating system only.

Parameter	Specify . . .	Possible Values	Default
GROUPS	whether BS2000 interprocess communication is limited to users with the same logon ID.	YES   NO	NO

This parameter limits the accessibility of ADARER and its ID table (IDT) to a group of users with the same logon ID.

Value	Meaning
YES	Allows the user(s) access to the IDT that starts under the same logon ID as the Adabas nucleus. When initialized, the IDT is set to GROUPS=YES; all users (nuclei, utilities, Entire Net-work, and all user tasks) must therefore also specify GROUPS=YES in either the ADARUN statement or using the Adalink parameters.
NO	The default setting. All users on one machine have access to this IDT, even if they are logged on under a different logon ID.

### Note:

More than one IDT with the same name can be used if one is set to GROUPS=NO (the default) and the rest specify GROUPS=YES.

### Example:

```
ADARUN PROG=ADANUC, DBID=11, GROUPS=YES
```
