

# IDTNAME : Define ID Table Name

This parameter applies to the BS2000 operating system only.

Parameter	Specify . . .	Possible Values	Default
<u>IDTNAME</u>	an alternate ID table.	ADAccccc	ADABAS5B

Defines a name for an (alternate) Adabas environment. The name must be eight characters long, and begin with "ADA...".

**Note:**

All users of the new ID table must include the IDTNAME in either the ADARUN statement or Adalink parameters.

**Example:**

Define the name "ADAOURDB" for the second Adabas environment.

```
ADARUN PROG=ADANUC, IDTN=ADAOURDB
```
