

LDEUQP : Length of Unique Descriptor Pool

Parameter	Specify . . .	Minimum	Maximum	Default
<u>LDEUQP</u>	the size of the unique descriptor pool.	0	16 777 215	5000

The unique (UQ) descriptor pool comprises elements that are the length of a unique descriptor value plus 11 bytes. The UQ descriptor pool should be large enough to hold all unique descriptors that are being changed by *all* transactions at any point in time.

In environments running in 31-bit addressing mode, the LDEUQP pool is allocated above the 16-megabyte line.

Example:

Assuming that the average length of unique descriptor values is about 9 bytes, this Adabas session can process a maximum of about 50 unique descriptors at one time.

```
ADARUN PROG=ADANUC,LDEUQP=1000
```
