

LOCAL : Local Nucleus

Parameter	Specify . . .	Possible Values	Default
LOCAL	whether a nucleus is isolated and available for local use only.	YES NO	YES

Defines an isolated nucleus that is only available locally. The nucleus is unknown to Entire Net-Work. A nucleus specifying LOCAL=YES (the default) can have the same database ID as another database nucleus on another network node.

Value	Meaning
YES	Isolates this nucleus (that is, makes it unaddressable) from other Entire Net-Work nodes.
NO	Allows the nucleus to receive calls from other Entire Net-Work nodes.

Example:

The Adabas nucleus is isolated and can not be addressed by other Entire Net-Work nodes.

```
ADARUN PROG=ADANUC,LOCAL=YES
```
