

NONDES : Nondesoriptor Searches

Parameter	Specify . . .	Possible Values	Default
NONDES	whether to allow (YES) or disallow (NO) searches using nondescriptors in search buffers.	YES NO	YES

By default, you can perform searches on Adabas fields that have not been defined as descriptors. However, nondesoriptor searches carry significant overhead.

NONDES=NO prevents searches on nondescriptors. An attempt to search on a nondesoriptor field produces response code 68.

Example:

Disallow searches using nondescriptors.

```
ADARUN PROG=ADANUC, NONDES=NO
```
