

TCPIP : TCP/IP Access Control (OS/390 or z/OS Only)

Parameter	Specify . . .	Possible Values	Default
<u>TCPIP</u>	whether to activate a direct TCP/IP link to the Adabas nucleus.	YES NO	NO

For UES-enabled databases, Adabas version 7 supports a direct TCP/IP link to the OS/390 or z/OS Adabas nucleus from web-based applications or from PC-based applications such as Natural for Windows.

See the Adabas Installation documentation for information about installing direct TCP/IP database access.

The TCPIP parameter is used to activate a direct TCP/IP link to the Adabas nucleus.

If TCPIP=YES, you can specify the universal resource locator (URL) required to activate the direct TCP/IP link in the ADARUN parameter TCPURL.

Example:

Run Adabas with a direct TCP/IP link to the nucleus.

```
ADARUN PROG=ADANUC,TCPIP=YES,TCPURL=HPS://STACKNAME:12345
```
