- Files With Caching
- Maintain File Cache
- Maintain Cache Spaces
- Maintain Cache Parameters
- Cache Session Summary

File-Level Caching Main Menu

If the ADARUN CFILE parameter has been specified, the File Level Main Menu appears when you select Caching Facility from the main menu:

```

13:59:12          ***** A D A B A S C A C H I N G   F A C I L I T Y   *****      2004-05-11
                                     - File Level Main Menu -                               PCF0002
                                                                                               File Level

                Code      Function
                ----      -
                D          Define File Cache
                F          Files with Caching
                M          Maintain File Cache
                O          Maintain Cache Spaces
                P          Maintain Cache Parameters
                S          Cache Session Summary
                ?          Help
                .          Exit
                ----      -

Code ..... _
DataBase ..... 1955   (WIS1955)

Command ==>
PF1----- PF2----- PF3----- PF4----- PF6----- PF7----- PF8----- PF12-----
Help                Exit                Menu

```

The following functions are available:

Code	Description
D	Define a new cache space for one or more files
F	Display detailed cache space statistics for a file
M	Enable, disable, or delete caching for one or more files
O	Enable, disable, or delete caching for the Work dataset
P	Display and modify current settings of ADARUN parameters
S	Display summary cache session statistics

Notes:

1. Although it is possible to define different cache spaces for the Associator and Data Storage of a single file using a separate ADARUN CFILE parameter for each, it is not possible to do so using Adabas Online System functions or operator commands. To define both Associator and Data Storage caching for a file using Adabas Online System functions or operator commands, you must use the BOTH option that uses the same caching parameters for both.
2. Once file level caching has been defined for a file using the ADARUN CFILE parameter, Adabas Online System functions, or operator commands, it is not possible to change the caching parameters without first deleting the defined cache space and then adding a new cache space with the different parameters. For example, if you have Data Storage caching defined for a file and you want to add Associator caching, you must first delete the Data Storage cache space and redefine caching for the file using the BOTH option.

Define File Cache

Selecting option D from the File Level Main Menu displays a menu of functions used to define a new cache space for one or more files:

```

13:32:45          ***** A D A B A S C A C H I N G   F A C I L I T Y   *****          2004-05-11
                   - Define File Cache -                                     PCFD002
                                                                                                     File Level

                   Code      Function
                   ----      -
                   A         Define Asso Cache
                   B         Define Asso and Data Cache
                   D         Define Data Cache
                   ?         Help
                   .         Exit
                   ----      -

Code ..... _
Memory Type ..... _
File Number ..... 0_____ - _____
Class of Service .. _
Database ..... 1955 (WIS1955)

Command ==>
PF1----- PF2----- PF3----- PF4----- PF6----- PF7----- PF8----- PF12-----
Help                Exit                Menu

```

Field	Description
Code	One or more files may be defined for Associator (option A), Data Storage (option D), or both (option B). No RABN ranges need to be specified: RABNs are added automatically. The file number may be any file within the database maximum files value.
Memory Type	The memory type may be extended (E), data space (D), hiperspace (H), or virtual 64 (V), depending on the operating system environment.
File Number	The file or file range for which caching is to be defined.
Class of Service	The class of service. Possible values are: <ul style="list-style-type: none"> ● 1: cache up to 100% of the file ● 2: cache up to 75% of the file ● 3: cache up to 50% of the file ● 4: cache up to 25% of the file ● 5: cache up to 10% of the file

Files With Caching

Selecting option F from the File Level Main Menu displays a list of files that use caching:

```

13:37:48          ***** A D A B A S CACHING FACILITY *****          2004-05-11
DBID 1955          - Files with Caching -                               PCFF002
                                                                    File Level

Sel   File   File Name                               Cache Type   State
---   ---   -
      0   Unassigned RABNs                       Asso/Data   Not accessed
      1   EMPLOYEES                               Asso/Data   Active
      2   VEHICLES                               Asso/Data   Active
      3 - 5 not loaded
      6   EXPANDED                               Asso/Data   Not accessed
      7   EXPANDED                               Asso/Data   Not accessed
      8 - 9 not loaded
     10   TRIGGER-FILE                          Asso/Data   Not accessed
     11 - 18 not loaded
     19   CHECKPOINT                            Asso/Data   Active
     20 - 25 not loaded

Specify 'DI' (Display), EN (Enable) DE (Delete) or DS (Disable) for a file

Command ==>
PF1----- PF2----- PF3----- PF4----- PF6----- PF7----- PF8----- PF12-----
Help      Repos      Exit      Refr      --          +          Menu

```

Entering DI in the Sel column for a file displays detailed cache space statistics for that file.

The information displayed on the resulting Statistics screen is the same as that provided by the CFSTAT command.

```

13:41:59          ***** A D A B A S CACHING FACILITY *****          2004-05-11

Help                Exit                +                Menu

```

Each file may have as many as five extent screens for each of the following:

AS	Unassigned Associator
AC	Address Converter
NI	Normal Index
UI	Upper Index
DS	Data Storage

The example screen shown here provides information for one DS extent of file number 1.

Maintain File Cache

Selecting option M from the File Level Main Menu displays a menu of functions used to enable, disable, or delete caching for one or more files:

```

13:43:56          ***** A D A B A S CACHING FACILITY *****          2004-05-11
                   - Maintain File Cache -                               PCFM002
                                                                                   File Level

                   Code      Function
                   ----      -
                   D        Delete Cache
                   E        Enable Cache
                   S        Disable Cache
                   ?        Help
                   .        Exit
                   ----      -

Code ..... _
File Number .. 0_____ - _____
Database ..... 1955 (WIS1955)

Command ==>
PF1----- PF2----- PF3----- PF4----- PF6----- PF7----- PF8----- PF12-----
Help                Exit                Menu
    
```

This following functions are available:

D	Delete all cache spaces for a particular file or range of files
E	Enable all cache spaces for a particular file or range of files
S	Disable all cache spaces for a particular file or range of files

Maintain Cache Spaces

Selecting option O from the File Level Main Menu displays the Work cache spaces:

```

13:45:34          ***** A D A B A S CACHING FACILITY *****      2004-05-11
DBID 1955          - Maintain Cache Spaces -                          PCHS002
                                                                File Level
Sel No   Mem. Cach RABN Range          Last Activity   Stat Error Status
         Type Type From           To
-----
64001 EXT WRK2 202           211            UNAL
64002 EXT WRK3 222           2392           UNAL

Select DI(Display) EN(Enable) DS(Disable) DE>Delete) MO(Modify)

PF1----- PF2----- PF3----- PF4----- PF6----- PF7----- PF8----- PF12-----
Help                Exit       Refresh                Menu

```

For each RABN range listed on the Maintain Cache Spaces screen, you can display caching parameters, modify the memory type, and maintain the cache space by entering one of the following commands in the Select column:

MO	Move the selected cache space to the memory type (E for extended; D for data space; H for hiperspace; V for virtual 64) you specify on the Memory Type window that appears.
DE	Delete the selected cache space. Once deleted, the space must be redefined using the relevant ADARUN parameters.
DI	Display the detailed cache space statistics. The information provided is the same as that resulting from the CSTAT operator command.
DS	Disable the selected cache space.
EN	Enable the selected cache space.

The other columns on the Maintain Cache Spaces display contain the following information:

Column	Description
No.	Cache space number (CSN). This is actually a unique RABN Range ID as there is no longer a direct correlation between cache spaces and RABN ranges.
Memory Type	Caching location for each cache space: extended storage (EXT), data spaces (DS), hiperspaces (HS), or virtual 64 storage (V64).
Cache Type	Database component being cached in the cache space: Work part 2 (WRK2), or Work part 3 (WRK3).
RABN Range	The starting (From...) and ending (To...) RABNs of the RABN range being cached in the cache space.
Last Activity	The date and time the cache space was last accessed.
Status	The current status of the cache space: disabled (DISA); unallocated (UNAL); or ALLC (allocated).
Error Status	If an error condition has occurred, the cause of the error will be displayed in this field.

Work Cache Space Statistics

Entering DI in the Select column on the Maintain Cache Spaces screen displays the Cache Statistics screen for an individual Work cache space:

```

13:47:03          ***** A D A B A S CACHING FACILITY *****      2004-05-11
DBID 1955                - Cache Statistics -                          PCHS002
                                                                    File Level

Cache Space No .....      1
Memory Type .....      EXT
Cache Component ...      WRK2
RABN-range .....      202 - 211
Last Activity .....
Cache Status .....      UNALLOCATED
Cache Writes .....          0
Max. Cache used ...          0          Elapsed Time per Cache Read Request
Cache Size .....      57344          Max. ...      0.000000
Cache Efficiency ..          0.0 %          Min. ...      0.000000
Cache Reads .....          0          Avg. ...      0.000000
Read EXCPS .....          0
Total Reads .....          0          EXCP Time <in microseconds>
RABN's in Cache ...          0          Max. ...      0.000000
RABN's/Cache Space.      10          Min. ...      0.000000
RABN Index Size ...      56 (bytes)      Avg. ...      0.000000

Press ENTER to continue
    
```

The information displayed on this screen is the same as that displayed by the CSTAT operator command.

Notes:

1. Values for Max. ASSO Cache Size and Max. DATA Cache Size represent bytes, but may be marked with a K (1 kilobyte=1024 bytes), M (1 megabyte=1,048,576 bytes), or G (1 gigabyte=1,073,741,824 bytes) indicator when the size of the value requires it.
2. If the ADACSH-related ADARUN parameters are changed, I CMS must be issued before each nucleus is started in a VM/ESA environment.

Maintain Cache Parameters

Selecting option P from the File Level Main Menu displays the current setting of the Adabas Caching (ADARUN) parameters and allows you to change them:

```

14:00:14          ***** A D A B A S C A C H I N G   F A C I L I T Y   *****          2004-05-11
