

Estimating Space for the DD/FILEA Sequential Dataset

Option "F" calculates the space required for the DD/FILEA sequential dataset when it is used with the ADAORD utility. (The dataset is also used with the ADALOD utility.)

```

08:37:35          ***** A D A B A S  BASIC  SERVICES  *****          2005-11-23
                                - DDFILEA Storage -                                PSPF002

          Code  Reorder                                Maximum Space Required
          ----  -
DB -Function  :  A    Asso
                  B    Data                            Bytes .....
                  C    DB                              Blocks .....
                  D    Restruct DB                      Cylinder ...
FILE -Function :  E    FAsso
                  F    FData                            Blocksize ..
                  G    File
                  H    Restruct File
                  .    Exit
          ----  -

          Code ..... _
          File .....
          Device ... 8391
          DB-ID .... 105      (RD-MPM105)
    
```

The equivalent direct command is

```

CALCULATE DDFILEA
    
```
