

Performing Software AG Directory Server Administration

This chapter describes the administration tasks you can perform for the Directory Server using the System Management Hub.

Note:

Within SMH, two types of Directory Server administration are listed: Flat Files and Directory Servers. Software AG products do not use the **Flat File** maintenance option of the Directory Server administration. All administration tasks are performed using the **Directory Servers** maintenance option. For this reason, only the **Directory Servers** maintenance options are described in this chapter.

This chapter covers the following topics:

- *The Directory Server Administration Area*
- *Refreshing SMH Displays*
- *Maintaining Directory Server Links*
- *Maintaining Partitions*
- *Maintaining Targets*
- *Specifying Trace Settings*
- *Changing Hosts*
