

SMH Agent Prerequisites

- A TCP/IP stack must be installed and active on the Entire Net-Work host machine. Entire Net-Work Administration uses the SMH line driver to access the System Management Hub. The SMH line driver uses the TCP/IP protocol stack.
- Entire Net-Work version 7 or Entire Net-Work Client, or at least the System Management Hub and Software AG Directory Server (ADI) components, must be installed on a workstation in the network that can be accessed by the Entire Net-Work Administration host machine. For more information, refer to the documentation for Entire Net-Work version 7 or Entire Net-Work Client.
