

About this Documentation

This document provides information about initialization, termination, backout, restart, and recovery processes in an Adabas Parallel Services cluster environment. It tells you how to plan an outage and how to use the utility functions that are provided specifically for cluster environments. Finally, it provides a sample of the session-end statistics produced for a clustered nucleus and describes how to improve performance and tune Adabas Parallel Services.

This document is organized as follows:

	<i>Initialization</i>	Describes topics related to Adabas Parallel Services initialization.
	<i>Termination</i>	Describes topics related to Adabas Parallel Services termination.
	<i>Backout Processing</i>	Describes Adabas Parallel Services backout processing.
	<i>Restart/Recovery Processing</i>	Describes Adabas Parallel Services restart and recovery processing.
	<i>Utility Processing</i>	Describes Adabas Utilities processing pertinent to Adabas Parallel Services.
	<i>Cluster Nucleus Session End Statistics</i>	Describes the statistics collected for a cluster nucleus session.
	<i>Performance and Tuning</i>	Describes performance and tuning you can do for Adabas Parallel Services.
