

# About this Documentation

This document describes the parameters which are used to control Adabas Vista processing. These parameters are defined and maintained using Adabas Vista Online Services.

<b>Job Parameters</b>	<b>General Parameters</b>	<b>File Partitioning Parameters</b>	<b>File Translation Parameters</b>
Clustered Application Service Name	Command Limit	Access	Target Database Number
Distributed Lock Mode	Enable API Override	Adabas TOPISN	Target File Number
Enable Multiple Database Updates	Source Database Number	Critical	
Enable Profile Overrides	Source File Number	Enable ISN Positioning	
Error Reporting	Source Name	Maximum Number Partitions	
Error Response Code	Source Profile ID	Partition Database Number	
Estimated Client Sessions	Target Category	Partition File Number	
ET Data Database Number		Partition ID	
Fixed Memory Pool Size		Partition ID Assignment	
Global Format IDs		Partitioning Field	
Manage Sessions		Partitioning Field High Value	
Profile ID Validation		Shared Partition	
Profile Overrides Selection		Store Control Option	
Read-Ahead Pool Size		User Partition Concurrency	
Read-Ahead Process			
System Coordinator Group Name			
Trace
