

Batch Processor Job Control Requirements

This chapter covers the following topics:

- For OS/390 or z/OS Environments
 - For VSE/ESA Environments
 - For BS2000 Environments
 - For z/VM Environments
-

For OS/390 or z/OS Environments

The job shown below is contained in member REVIEWB of the Adabas Review source library and can be used to execute the Adabas Review processor in batch.

► To modify the job before submitting it

1. Change "vrs" to the current version, revision, and system maintenance level of the product.
2. Modify the job card, if necessary.
3. Modify the DD statement for RVUSEQ as necessary. Point to a command log file generated by Adabas or Adabas Review.
4. Add any additional RVUPRTxx or RVUCOPxx DD statements as necessary depending on your report definitions (where "xx" is a value 01 through 99).

```
//REVIEWB JOB  
(LOCATION) , 'REVIEW' , MSGCLASS=X , CLASS=A  
/*  
//REVIEWB EXEC PGM=REVIEWB , REGION=512K  
//STEPLIB DD DISP=SHR , DSN=REVIEW.Vvrs.LOAD  
//          DD DSN=SHR , DSN=ADABAS.Vv.LOAD  
/*  
//RVUSEQ DD DSN=SHR , DSN=ADABAS.COMMAND.LOG.FILE.  
//          DCB=(RECFM=VB,BLKSIZE=10000)  
//RVUFLD DD DSN=SHR , DSN=REVIEW.Vvrs.SOURCE(USRPARM)  
/*  
//RVUPRT00 DD SYSOUT=X , LRECL=80  
//RVUPRT01 DD SYSOUT=X , LRECL=133  
//RVUPRT02 DD SYSOUT=X , LRECL=133  
//SYSUDUMP DD SYSOUT=X  
//TRACEOUT DD SYSOUT=X , LRECL=133  
/*  
//RVUPARM DD *  
INPUT   FILETYPE=SEQUENTIAL , LIMIT=1000  
*  
REPORT  TYPE=SUMMARY , TITLE='SAMPLE REPORT'  
AVERAGE DURATION , ASSO-IO , DATA-IO , CMDRESP  
MINIMUM DURATION , ASSO-IO , DATA-IO , CMDRESP
```

```
MAXIMUM DURATION,ASSO-IO,DATA-IO,CMDRESP
DISPLAY JOB
*
/*
```

The following DD statements are required, or optional where noted, for executing the Adabas Review processor in interactive or batch mode:

DD Statement	Description
RVUPARM	A dataset of control statements that specify input report parameters. These statements can be generated by the GENCARD command and copied from the resulting RVUCARD output into the RVUPARM dataset. LRECL=80.
RVUSEQ	Sequential dataset containing command log records: RECFM=VB,LRECL=9996,BLKSIZE=10000
RVUCOPxx	(Optional) Copied output logs; same format as RVUSEQ (where "xx" is 01-99).
RVUPRTxx	Review logical printers (where "xx" is 01-99). LRECL is required. It may be in the range of (72-4080); LRECL=133 is typical.
RVUALT	Alternate sequential file used to save history information if the Adabas Review processor, either interactively or in batch, receives an Adabas response code 148 (Adabas not active) when attempting to save history data. This file should be allocated using the following DCB attributes: RECFM=VB,LRECL=9996,BLKSIZE=10000
RVUAUT1	(Optional in batch mode) Parameter card images for autostarted reports; LRECL=80.
RVUAUT2	(Optional in batch mode) Parameter card images for autostarted reports; LRECL=80. Note: Adabas Review uses two parameter files for the report definition control statements and alternates between them by writing to the older file. See the section Autostarted Reports on page .
RVUFLD	Parameter card images; LRECL=80. Parameters to describe user-defined fields.

For VSE/ESA Environments

The job shown below is contained in member REVIEWB of the Adabas Review source library and can be used to execute the Adabas Review processor in batch.

► To modify the job before submitting it

1. Change "vrs" to the current version, revision, and system maintenance level of the product.
2. Modify the job cards, if necessary.

3. Modify the job control statement for RVUSEQ as necessary. Point to one of the command log files.
4. Add any additional RVUPRTxx or RVUCOPxx job control statements as necessary, depending on your report definitions (where "xx" is a value 01 through 99).

```
// JOB REVIEWB                                sample
Review job
// EXEC PROC=REVvrs                         Review private libraries
// ASSGN SYS005,SYSIPT                        RVUPARM - cards
// ASSGN SYS006,DISK,VOL=VVVVVVV,SHR          RVUSEQ - tape
// ASSGN SYS007,IGN                           MAY be IGN for batch
// ASSGN SYS020,PRINTER                       RVUPRT0 - printer
// ASSGN SYS021,CUU                           RVUPRT1 - printer
// DBLB RVUSEQ, 'ADABAS.Vvr.COMMAND.LOG'    RVUSEQ - command
log
// EXTENT SYS006,VVVVVV
// EXEC REVIEWB,SIZE=(AUTO,64K)
INPUT   FILETYPE=SEQUENTIAL,LIMIT=1000
REPORT  TYPE=SUMMARY,TITLE='SAMPLE REPORT'
AVERAGE DURATION
MINIMUM DURATION,ASSO-IO,DATA-IO,CMDRESP
MAXIMUM DURATION,ASSO-IO,DATA-IO,CMDRESP
DISPLAY JOB
/*
```

Note:

The logical units shown in the example above may be reassigned if there are conflicts with your site-specific logical units. Refer to the Adabas Review Installation and Operations (VSE/ESA) documentation for more information.

The following job control statements are required, or optional where noted, for executing the Adabas Review processor in interactive mode or batch mode:

Job Control Statement	Logical Unit(s)	Description
RVUPARM	SYS005	Parameter card images; 80-byte records. RVUPARM is a dataset of control statements that specify input report parameters. These statements can be generated by the GENCARD command and copied from the resulting RVUCARD output into the RVUPARM dataset.
RVUSEQ	SYS006	Sequential dataset containing command log records: Record Format = VB, Record Length = 9996, Block Size = 10000.
RVUCOPx	SYS031-39	(Optional) Copies output logs; same format as RVUSEQ (where "x" is 1-9).
RVUPRTx	SYS020-29	Review logical printers (where "x" is 0-9).
RVUALT	SYSxxx*	Alternate sequential file used to save history information if the Adabas Review processor, either interactively or in batch, receives an Adabas response code 148 (Adabas not active) when attempting to save history data. This file should be allocated using the job DBFILES in the Adabas Review source library. * May be any unused value.
RVUAUT1 / RVUAUT2	SYS007	(Optional in batch mode) Parameter card images for autostarted reports. Adabas Review uses two parameter files for the report definition control statements and alternates between them by writing to the older file. Note: SYS007 may be assigned to IGN when running Adabas Review in batch mode.

For BS2000 Environments

The job shown below is contained in member P.REVBATCH of the Adabas Review source library and can be used to execute the Adabas Review processor in batch.

► To modify the job before submitting it

1. Set &ADAL to the Adabas Library
2. &BATCH to the output file prefix
3. &CLOG to the command log generated by Adabas or Adabas Review &REVL to the Adabas Review Library
4. modify the parameters following the '/STA-EDT' card to those required for the job

```
/BEGIN-PROC C,PROC-PAR=( -  
/ &ADAL=$SAG.ADABAS.MOD,-  
/ &BATCH=BATCH,-  
/ &CLOG=$SAG.DB00099.CLOGR1,-  
/ &DUMP=YES,-
```

The following Link statements are required (or are optional where noted), for executing the Adabas Review processor in interactive or batch mode:

Link Statement	Description
RVUPARM	Parameter card images; REC-FORM=FIXED(REC-SIZE=80). RVUPARM is a dataset of control statements that specify input report parameters. These statements can be generated by the GENCARD command and copied from the resulting RVUCARD output into the RVUPARM dataset.
RVUSEQ	Sequential dataset containing command log records
RVUCOPxx	(Optional) Copied output logs; same format as RVUSEQ (where 'xx' is 01-99).
RVUPRTxx	Review logical printers (where 'xx' is 01-99). Sequential file with REC-FORM=FIXED(REC-SIZE=133).
RVUALT	Alternate sequential file used to save history information if the Adabas Review processor, either interactively or in batch, receives an Adabas response code 148 (Adabas not active) when attempting to save history data.
RVUAUT1	(Optional in batch mode) Parameter card images for autostarted reports; REC-FORM=FIXED(REC-SIZE=80).
RVUAUT2	(Optional in batch mode) Parameter card images for autostarted reports; REC-FORM=FIXED(REC-SIZE=80).

Note:

Adabas Review uses two parameter files for the report definition control statements and alternates between them by writing to the older file. See the section Autostarted Reports. RVUFLD Parameter card images; REC-FORM=FIXED(REC-SIZE=80). Parameters to describe user-defined fields.

For z/VM Environments

The Adabas Review processor is executed in batch mode using the REVBATC EXEC provided on the Adabas Review installation tape. The only parameter required is the name of the file containing the Review input parameters. The FILETYPE of the input parameters must be "REVPARMS". For example, the following runs Adabas Review in batch mode using the report parameters found in "SAMPLE1 REVPARMS":

```
REVBATCH SAMPLE1
```

The following filedef statements are required, or optional where noted, for executing the Adabas Review processor in interactive mode or batch mode:

Filedef Statement	Description
RVUPARM	Parameter card images; LRECL=80.
RVUSEQ	Sequential dataset containing command log records: (RECFM VB LRECL 9996 BLOCK 10000)
RVUCOPxx	(Optional) Copied output logs; same format as RVUSEQ (where "xx" is 01-99).
RVUPRTxx	Review logical printers (where "xx" is 01-99). LRECL is required. It may be a value in the range 72-408; LRECL=133 is typical.
RVUALT	Alternate sequential file used to save history information if the Adabas Review processor, either interactively or in batch; receives an Adabas response code 148 (Adabas not active) when attempting to save history data. This file should be allocated using the following DCB attributes: (RECFM VB LRECL 9996 BLKSIZE 10000)
RVUAUT1 RVUAUT2	<p>(Optional in batch mode) Parameter card images for autostarted reports; LRECL=80.</p> <p>Note: Adabas Review uses two parameter files for the report definition control statements and alternates between them by writing to the older file. See the section Autostarted Reports on page .</p>
