Accessing Adabas Review Repositories

The Adabas Review repository is an Adabas file used for storing report definitions, historical data, and target definitions for Adabas Review.

Depending on the configuration at your site, more than one Adabas Review repository may be associated with your system. For example, if your site has Adabas Review installed on more than one database, there may be an Adabas Review repository for each database.

Using the SETFILE Command

The Review command SETFILE (or SET) and SETALL (or SETA) may be used to access different Adabas Review repositories and the reports stored on them.

The SETALL command differs from the SETFILE command in that it allows you to also change the current DBID/HUBID where Review is communicating. Changing this value has the same effect as entering `DBID=nnnnn` or `HUB=nnnnn` into the command line.

▶ **To access different Adabas Review repositories**

1. Enter the command SETFILE or SET on the command line of any Adabas Review screen and press ENTER.

2. Provide the DBID and FNR for the Adabas Review repository you wish to access and press ENTER.

   You are now able to access reports stored on a different Adabas Review repository. The setting remains until you either change it again or log off Review.
