Preparing for the Installation

This section of the documentation provides installation preparation information for Adabas Review 4.3.2 or above under BS2000 operating system environments.

The installation of Software AG products is performed by installation *jobs*, which are either created *manually* or generated by System Maintenance Aid (SMA).

For each step of the installation procedure described below, the job number of a job performing the respective task is indicated. This job number refers to an installation job generated by SMA. If you are not using SMA, a sample installation job of the same number is provided in the job library on the Natural installation tape; you must adapt this example job to your requirements.

For information about using Software AG's System Maintenance Aid (SMA) for the installation process, refer to the *System Maintenance Aid* documentation.

For installation with SMA please read #READ-ME.REV.

This chapter covers the following topics:

- Prerequisites

Prerequisites

Operating System Level

Before installing Adabas Review 4.3.2 or above, ensure that you are running BS2000 OSD 2.0 and above.

Adabas Version Requirements

There are specific version requirements for Review 4.3.2 in both local and hub mode. See section *Review 4.3 Version Compatibility* in the *Review 4.3.2 Release Notes* for a detailed matrix of these version requirements.

Natural Version Requirements

Adabas Review version 4.3.2 supports Natural version 2.3.4 and above.

TP Monitor Support

Adabas Review version 4.3.2 requires one of the following TP monitors:

- TIAM

- UTM
