Purging a Report Definition

The Purge Reports (PR) command is issued from the Report Definitions screen (LR function). This command deletes the report definition and the corresponding display program, if the display program is not also used with a history report.

▶ To purge a report definition

1. Enter the PR command on the selection line preceding the name of the report to be deleted.

   Depending on your profile settings, you may be prompted to confirm the purge request before the command is executed.

2. Confirm the purge request, if required.
