

Estimating Data Storage Space

Option "D" calculates Data Storage based on values you provide for estimated maximum record count, the average length of a compressed record, a Data Storage padding factor, and device type. Results are specified in both blocks and cylinders.

```
08:36:55          ***** A D A B A S  BASIC  SERVICES  *****          2006-07-14
DBID 105              - Data Storage -                               PSPD002

Maximum number of records for the file .. 0_____
Average compressed record length ..... 0
Padding factor for DATA ..... 10 %
DATA device-type / blk. size ..... 8391 / 10796

Required number of blocks ..... 0
Required number of cyls. .... 0
```

The equivalent direct command is

CALCULATE DATA
