Considerations for BS2000

COR requires both the COR load library and the Adabas load library to be defined in the BLSLIB*nn* concatenation of all Adabas databases where COR is used.

When used with Adabas Version 7.4, the supplied COR812.LX01 library is required. This contains the COR Version 8.1 database components (ADAPO*x*, AFPADA, AVIADA). This library must be added to the start of the load library concatenation in all database startup procedures, replacing the equivalent modules in the Adabas Version 7.4 library. The library must be named in the ADD-FILE-LINK statements for the DDLIB and the BLSLIB*nn* file concatenation.
