The screen shows:

- Information about the current job and whether it is running in daemon mode
- The primary and alternate configuration files in use. If the configuration file has not yet been accessed successfully and SF148 is set to “Continue”, PF11 is named Retry and can be used to force another attempt to access the configuration file (for example, after the database has been started).

- Which products are defined as critical for this client job
- Which products are currently active in this client job
- The number of active threads, thread recoveries and active sessions
- The current timeout settings for this client job. You can change these dynamically by entering a new value and pressing PF5.

Verify Adabas System Coordinator Client Installation

This function can be used to verify the successful installation of an Adabas System Coordinator client.

Verify Adabas System Coordinator Daemon Installation

This function can be used to verify the successful installation of an Adabas System Coordinator daemon.

Display Zap Information

 To display the zap Information

- Select option 3 from Special Services menu.

[illegible]

Initially the screen will show all zaps applied to the Adabas System Coordinator kernel (CORKRN) in the client environment.

Enter a coordinator daemon node id or database id to display the zaps applied to the Adabas System Coordinator kernel in use by that daemon or database.
