Adabas Manager Window Layout

Each Adabas Manager window is divided into two scrollable parts:

- a tree-view on the left side of the screen

- detail information (detail-view) on the right side of the screen

You can navigate in the tree-view as you would in any directory tree. When you highlight (click on) an item in the tree, the detailed information about that entry is displayed in detail-view. To expand items under a high-level entry in the tree, click on the plus sign (+) to the left of the high-level entry.

Note:
Tree items you are not authorized to view for security reasons are not displayed; where menus are available for viewing but may not be modified, the respective buttons are grayed out in the detail-view panels.

Once you have highlighted an item in the tree, context-specific commands are listed in the **Commands** dropdown list in the screen title bar.

You can also see these commands by right-clicking on the highlighted menu item. Only this option is described in the documentation, but both options are always available.

All items in the tree show a **Refresh** option in their dropdown list.

▶ **To refresh any item in the tree:**

1. Select the item in the tree for which you want to view information and right-click on it (or view the **Commands** dropdown in the screen title bar).

2. Select **Refresh** on the dropdown menu.

   The information displayed in the detail-view is updated.
