

Using Adabas Review in Batch Natural

The functions described earlier to start and view Adabas Review reports are used mainly in an online environment. You may also perform these functions in a batch job to obtain statistics on a batch Adabas job as output from the job itself.

Note:

If you are trying to start a report in hub mode using batch Natural , you must issued the MENU HUB=*hubid* command prior to issuing the START command for the report.

This chapter covers the following topics:

- Example
 - Processing History Data in Batch Natural
 - Unloading and Restoring Report Definitions
-

Example

A batch Natural job (PAYROLL1) is run each night. When the job is completed, Adabas summary statistics are requested to determine the number of Adabas calls issued by the job, the files accessed, the type of Adabas commands issued, and a summary of ASSO, DATA, and WORK IOs for each command type within each file.

 To implement the request for Adabas summary statistics

1. Ensure that the Review load library is in the STEPLIB concatenation.
2. Define the following report definition and related processing rules to Adabas Review:

```

20:47:45                A D A B A S  -  R E V I E W                2003-07-07
                        Edit Report                                LOCL=00009

                        Report Processing Rules                    LOCL=00009

                        TRACE PAYROLL REPORT

+-----+
| Field      Op      Value                                     And/Or |
+-----+
| JOBNAME_   =  PAYROLL1_____                               _____|
| _____  _____                                     _____|
| _____  _____                                     _____|
| _____  _____                                     _____|
| _____  _____                                     _____|
| _____  _____                                     _____|
| _____  _____                                     _____|
| _____  _____                                     _____|
| _____  _____                                     _____|
+-----+
                        Page 1-----+

Command: _____
Enter-PF1---PF2---PF3---PF4---PF5---PF6---PF7---PF8---PF9---PF10---PF11---PF12---
      Help  Optns Exit          Save  Start  -    +          Flds  Menu

```

3. Save the report definition.
4. Change the PAYROLL1 job stream if necessary to produce the required results shown below:

```

LOGON SYSREVDDB                <---logon to
Review Natural library
START TRACE.PAYROLL.REPORT dbid <---start Review report
LOGON PAYROLL
*
* PAYROLL1 NATURAL STREAM
*
LOGON SYSREVDDB                <---logon to Review Natural
library
VIEW TRACE.PAYROLL.REPORT dbid  <---to display report results
DELREP TRACE.PAYROLL.REPORT dbid <---to delete report results
FIN

```

Note:

If you do not specify a DBID, Adabas Review uses the DBID corresponding to LFILE 241.

Processing History Data in Batch Natural

You may also use batch Natural programs to display, purge, or compress history data from the Adabas Review repository. Adabas Review provides sample jobs to perform these tasks.

To use these jobs

1. Point the LFILE to the DBID and FNR corresponding to the Adabas Review repository containing the history data.
2. Add the report name and date range.
3. Enter any embedded blanks in the report name as periods.

To display history data

1. Use the HISTVIEW job.

The following Natural statements are contained in the display history data job stream:

```

LOGON SYSREVDDB                <--logon to
Review Natural library.
HISTORY A.HISTORY.REPORT start-date end-date <--report name and
dates.
FIN
/*

```

To delete history data

1. Use the HISTDEL job.

The following Natural statements are contained in the delete history data job stream:

```

LOGON SYSREVDDB                <--logon to
Review Natural library.
DELHIST A.HISTORY.REPORT start-date end-date <--report name and
dates.
FIN
/*

```

 To compress history reports

1. Use the HISTCOMP job.

The following Natural statements are contained in the compress history job stream:

```
LOGON SYSREVDDB                <--logon to
Review Natural library.
COMPRESS A.HISTORY.REPORT start-date end-date et-factor <--report
info.
FIN
/*
```

Unloading and Restoring Report Definitions

Review report definitions can be unloaded to a sequential data set for backup, archive or for the purpose of moving the definition to a different Review system. There are two batch Natural programs to accomplish this, ULDREP and LODREP. ULDREP unloads a single report definition to a sequential data set as defined by the Natural work file CWFWK01. LODREP restores the definition from the same sequential data set.

The syntax for ULDREP is:

ULDREP report.name

where REPORT.NAME is the report name with periods between each word in the report name.

The syntax for LODREP is:

LODREP report.name

The job control statements to run ULDREP and LODREP are the same as other Review batch Natural jobs such as START, VIEW and DELHIST.
