

List Report Functions

Adabas Review provides three list functions for reports, which are accessible from the Adabas Review (DB system) menu:

Code	List ...	This function lists ...
LR	Report	existing Adabas Review reports by name. Reports may be edited, started, and purged using the commands in this function.
LH	History Reports	reports that have accumulated history data in the Adabas Review repository.
LS	Started Reports	reports that are currently accumulating data.

The lists displayed by the LH and LS functions are subsets of the list displayed by the LR function.

From the resulting lists, certain commands can be issued against a particular report that allow you to maintain report definitions, manage started reports, and manage the output they produce.

The commands are entered on the selection line preceding the name of the report.

To display a list of the commands available for a particular list function screen

1. Enter a ? in the selection line preceding a report name and press ENTER.

Commands for the List Report Definitions (LR) function are grouped as follows:

- Adabas Review *report processing* commands, which affect the report definition (see the chapter *Maintaining Report Definitions*;
- Natural *display program processing* commands, which affect the display program corresponding to the report definition (see the chapter *Maintaining Display Programs*; and
- Adabas Review *report output processing* commands, which affect the data collected by reports (see the chapter *Managing Report Output*.
