

# File Usage

"File Usage" breaks down file usage into the types of processing done to the file. It shows the total number of associator and data storage I/Os executed, the descriptor updates performed, the command response time used, the amount of Adabas processing time required, and the total number of commands.

This chapter covers the following topics:

- Fields Selected
  - Report Options Selected
  - Report Processing Rules
- 

## Fields Selected

| Field    | Order | Sum | Min | Max | Avg | Pct | Rate | Round |
|----------|-------|-----|-----|-----|-----|-----|------|-------|
| FILE     | 1     |     |     |     |     |     |      |       |
| ASSOIO   |       | Y   |     |     |     |     |      |       |
| DATAIO   |       | Y   |     |     |     |     |      |       |
| COMMANDS |       | Y   |     |     |     |     |      |       |
| DESUPD   |       | Y   |     |     |     |     |      |       |
| CMDRESP  |       | Y   |     |     |     |     |      |       |
| DURATION |       | Y   |     |     |     |     |      |       |

## Report Options Selected

Defaults.

## Report Processing Rules

None.
