1 Supplied Reports

This section describes the reports supplied with Adabas Review. These reports may be used without modification, or they may be customized to suit individual site requirements.

The Adabas Review Supplied Reports documentation is organized in the following topics:

•	How the Reports are Described
•	Report Results Screen
•	Application File Field Usage
•	Commands By Hour
•	Command Logging
•	Cost Accounting Example
•	Descriptor Usage Report
•	Exceptional Response Codes
•	File Usage
•	Hourly Database Overview
•	I/O Count by Hour
•	I/O Summary... Reports
•	I/O Summary by Volume
•	Job Overview
•	Last 500 Adabas Calls
•	Long Running Commands
•	Natural Program Trace
•	Natural Summary
•	Natural Transaction Trace

Supplied Reports

	PRILOG Report
	Rate of Commands and I/Os By Date
	Rate of Commands and I/Os By Hour
	Summary Report by File
	Thread Activity
	Thread Activity By Command
	Transaction Count... Reports
	Transaction Count By Job
	Transaction Detailed Information
	Transaction Summary By User
	Who is Using Natural?
	Who Uses SYSMAIN?
	Worst Calls... Reports
	Worst Calls By ADADURA
	Worst Transactions... Reports
	Worst Transactions By Calls

2 How the Reports are Described

In the following sections, each Adabas Review Supplied Report is described by:

- **Narrative Description**
describes the report.
- **Fields Selected Table**
shows the fields used for the report. The fields are listed by their system name. For a description of these fields, refer to section *Field Reference*.
- **Report Options Selected**
lists any report options which are different from the default report options.
- **Report Processing Rules**
lists the report processing rules, if any are selected.

To examine the report definitions online, refer to the chapter *Editing Existing Reports* in *Maintaining Report Definitions*.

3 Report Results Screens

A Report Results screen is provided for each report. Since some reports require more than one screen to show all of the data collected, the screen provided may not show all of the data being collected by the report.

► To see all of the report data

- View the report online and press PF11 to scroll the report horizontally, or press PF8 to scroll the report vertically.

4 Application File Field Usage

▪ Fields Selected	8
▪ Report Options Selected	8
▪ Report Processing Rules	8

Application File Field Usage

The "Application File Field Usage" report shows the processing activity, by file, for Natural application programs. Processing activity information includes the total number of commands and I/Os, as well as the total amount of command response time (CMDRESP) and time used to process in the Adabas thread (ADADURA).

This chapter covers the following topics:

Fields Selected

6 Command Logging

"Command Logging" is a detailed report that contains the necessary report options for using the command logging features of Adabas Review. It may be used as an example for creating reports that perform command logging. For more information about the use of the command logging report options, refer to the section *Logging Options*.

The following report options are required for command logging and are used in this report:

Detail/Sum	D
Print	N
Log	Y
File	name
Num of Logs	number
Log Size	number

A command log report must be a detailed report so that it produces a straight recording of each command processed by Adabas.

Data fields are not used in reports that perform command logging. Because it is a detailed report and cannot be viewed online, and because the PRINT option is set to "N", field information entered on the Edit Report screen produces no effect.

Command Logging

The following report options used in this report are *not* required for command logging:

AutoStart	Y
Log CB	Y
Log FB	Y
Log SB	Y
Log RB	Y
Log VB	Y
Log IB	Y
Log IO	Y
Log EX1	N
Log EX2	N

7

Cost Accounting Example

The "Cost Accounting Example" is a summary report designed to show how Adabas Review may be used to produce cost accounting reports about Adabas resource consumption.

For more information about this report, see the section *Cost Accounting Example*.

8 Descriptor Usage Report

■ Fields Selected	20
■ Report Options Selected	20
■ Report Processing Rules	20

Descriptor Usage Report

The "Descriptor Usage Report" shows processing done for Adabas fields used as descriptors. Commands are shown with the descriptor name for the field on which the command was performed. Processing statistics are given for each command, whether or not the command was performed on a descriptor.

This chapter covers the following topics:

Exceptional Response Codes

▪ Fields Selected	24
▪ Report Options Selected	24
▪ Report Processing Rules	25

"Exceptional Response Codes" gives a "snapshot" of the processing environment at the time that an Adabas command returns an exceptional response code. (Response codes are exceptional if they are *not* equal to 0, 3, 9, 17, or 48.) The information collected by this report may be used to help determine the cause and resolve the condition causing the exceptional response code.

This chapter covers the following topics:

10 File Usage

■ Fields Selected	28
■ Report Options Selected	28
■ Report Processing Rules	28

File Usage

"File Usage" breaks down file usage into the types of processing done to the file. It shows the total number of associator and data storage I/Os executed, the descriptor updates performed, the command response time used, the amount of Adabas processing time required, and the total number of commands.

This chapter covers the following topics:

12 I/O Count by Hour

■ Fields Selected	36
■ Report Options Selected	36
■ Report Processing Rules	36

I/O Count by Hour

"I/O Count by Hour" calculates and displays information on an hourly basis. It shows the total I/Os, and breaks them into totals for the associator, the data storage area, and the work area. Total number of commands is also shown. The processing rule "IOS GT 0" assures that reporting is on commands issuing at least one I/O.

This chapter covers the following topics:

13 I/O Summary... Reports

The two I/O summary reports "I/O Summary by RABN" and "I/O Summary by Volume" may be used to determine the components against which I/Os are performed. For commands issuing at least one I/O, these reports list the Adabas component against which the I/O was performed, and either the Adabas relative block number or the volume serial number of the device.

14 I/O Summary by Volume

16 Last 500 Adabas Calls

■ Fields Selected	50
■ Report Options Selected	50
■ Report Processing Rules	51

"Last 500 Adabas Calls" lists the last 500 Adabas call in order by Adabas sequence number. This report uses the report option "DISPLAY BY=SORTEDDE" which lists the calls in order by sequence number, starting with the most recent sequence number first.

The order in which the sequence numbers are displayed may be changed by using a different "DISPLAY BY=" option. The number of calls shown can be varied from 500, by changing the "ENTRIES=" option to any number desired. For example, "ENTRIES=100" displays the last 100 Adabas calls.

This chapter covers the following topics:

17 Long Running Commands

▪ Fields Selected	54
▪ Report Options Selected	54
▪ Report Processing Rules	55

"Long Running Commands" shows commands with a duration greater than three seconds and I/Os greater than 200.

The report processing rule "ADADURA GT 3.0" determines that commands with a duration greater than three seconds are selected for this report; to change the duration for the commands selected, change the number "3.0" to any number desired. Similarly, the report processing rule "IOS GT 200" selects commands with more than 200 I/Os; to change the I/O criterion for the commands selection, change "200" to any number desired.

This chapter covers the following topics:

18 Natural Program Trace

■ Fields Selected	58
■ Report Options Selected	58
■ Report Processing Rules	59

"Natural Program Trace" shows processing activity for a specific Natural program, sorted by Adabas sequence number. To specify the program to be reported on, use the processing rules:

```
NATAPPL EQ MYLOGON
```

where *MYLOGON* is the program library name; and

```
NATPROG EQ MYPROG
```

where *MYPROG* is the program name.

This chapter covers the following topics:

27 Transaction Count... Reports

For transaction numbers not equal to zero, Transaction Count... reports calculate and display the *total*

- number of completed Adabas transactions for the user;
- number of commands performed for the transactions;
- number of I/Os performed for the transactions;
- amount of command processing time; i.e., the time Adabas spent to process the command, and the time the command spent in the command queue;
- amount of time spent by Adabas to process the command;
- amount of time the command spent in the command queue.

28 Transaction Count By Job

29 Transaction Detailed Information

▪ Fields Selected	100
▪ Report Options Selected	100
▪ Report Processing Rules	100

Transaction Detailed Information

"Transaction Detailed Information" displays detailed processing information, by transaction number, for each transaction not equal to zero.

The processing rule "TPTRANNM NE 0" ensures that the transaction number will not be equal to zero.

This chapter covers the following topics:

Transaction Summary By User

Similar to the "Transaction Count" reports, "Transaction Summary by User" calculates and displays information about a user's TP transaction for transaction numbers not equal to zero.

The processing rule "TPTRANNNM NE 0" ensures that the transaction number will not be equal to zero.

This chapter covers the following topics:

32 Who Uses SYSMAN?

▪ Fields Selected	112
▪ Report Options Selected	112
▪ Report Processing Rules	112

Who Uses SYSMAIN?

"Who Uses SYSMAIN?" shows jobs which are using SYSMAIN. The job name is shown, listing the individual users, denoted by the user's TP user ID.

The report processing rule "NATAPPL EQ SYSMAIN" assures that only jobs using SYSMAIN are shown. This processing rule may be modified to equal any Natural application name.

This chapter covers the following topics:

33 Worst Calls... Reports

The six "Worst Calls" reports list and calculate information about the 100 "worst" Adabas calls. Each report rates its commands according to certain criteria:

Worst Calls by ...	Selects the 100 calls that ...
ADADURA	required the most Adabas processing time, and calculates a total for Adabas processing time.
CQDURA	spent the longest time in the command queue, and calculates a total for command queue duration.
DESCUPD	required the most descriptor updates, and calculates the total number of descriptor updates.
IOS	caused the most I/O operations to be performed, and calculates the total number of I/Os.
ISNQ	required the most ISNs, and calculates the total number of ISNs.
TOTDURA	required the longest processing time (i.e., time in the command queue and Adabas processing time) and calculates a total for processing time.

34 Worst Calls By ADADURA

35 Worst Transactions... Reports

The three "Worst Transactions" reports list and calculate information about the 100 "worst" transactions. Each report rates its transactions according to certain criteria:

Worst Transactions by ...	Selects the 100 transactions that ...
Calls	issued the most Adabas calls.
Duration	required the most Adabas processing time, including time spent in the command queue.
IOS	caused the most I/O operations to be performed.

The number of transactions shown can be varied from 100, by changing the "ENTRIES=" option to any number desired. For example, "ENTRIES=50" displays the 50 worst transactions.
