

INSTALLATION CHECKLIST

- Verify that Predict Version 3.4 or later is installed.
- Verify that the files and fields that are to be used by Adabas Native SQL applications are documented in the data dictionary. Adabas Native SQL recognizes only the PREDICT file types *Adabas file* and *Adabas userview*. Other file types are ignored by the Adabas Native SQL preprocessor.
- Use RESTORE to load the libraries from tape to disk.
- Verify that the error messages have been loaded (ERRLODUS).
- Edit the member SQLJCL.J as required.
- If an ADABAS interface module other than ADAUSER is to be used, relink ADABAS Native SQL using ADASQL.J.
- Ensure that the standard test files EMPLOYEES and VEHICLES are available and that they are correctly documented in the data dictionary. In particular, ensure that the file numbers and the database ID are correct. Ensure that the relationships for soft coupling are defined in the data dictionary. If you wish to use FORTRAN, ensure that appropriate language synonyms are defined in the data dictionary (see Appendix B in the *Adabas Native SQL Reference Manual*).
- Adapt the procedure SQLJCL.J to execute the test programs. Verify the output.
