FDTPRINT: Print/ Dump Field Definition Table

```
ADAICK   FDTPRINT   FILE = file-number
                    [NOUSERABEND]
```

Use the FDTPRINT function to print and dump the field definition table (FDT) of a file.

This chapter covers the following topics:

- Essential Parameter

- Optional Parameters

Essential Parameter

FILE: File Number

The number of the file for which the FDT is to be printed/dumped. A file number is required the first time you execute ADAICK.

If FILE is omitted on subsequent executions, the last file accessed by ADAICK is used.

Optional Parameters

NOUSERABEND: Termination without Abend

When an error is encountered while the function is running, the utility prints an error message and terminates with user abend 34 (with a dump) or user abend 35 (without a dump).

If NOUSERABEND is specified, the utility will *not* abend after printing the error message. Instead, the message "utility TERMINATED DUE TO ERROR CONDITION" is displayed and the utility terminates with condition code 20.
