

JCL/JCS Requirements and Examples

This section describes the job control information required to run ADAINV with BS2000, z/OS, z/VM, and VSE systems and shows examples of each of the job streams.

This chapter covers the following topics:

- Collation with User Exit
- BS2000
- z/OS
- z/VM
- VSE

Collation with User Exit

If a collation user exit is to be used during ADAINV execution, the ADARUN CDXnn parameter must be specified for the utility run.

Used in conjunction with the universal encoding support (UES), the format of the collation descriptor user exit parameter is

ADARUN CDXnn= exit-name

where

| | |
|-----------|--|
| nn | is the number of the collation descriptor exit, a two-digit decimal integer in the range 01-08 inclusive. |
| exit-name | is the name of the user routine that gets control at the collation descriptor exit; the name can be up to 8 characters long. |

Only one program may be specified for each collation descriptor exit. Up to 8 collation descriptor exits may be specified (in any order). See the *Adabas DBA Reference* documentation for more information.

BS2000

| Data Set | Link Name | Storage | More Information |
|----------------------|-----------------|---------|--|
| Associator | DDASSORn | disk | |
| Intermediate storage | DDTEMPR1 | disk | |
| Sort area | DDSORTR1 | disk | |
| Sort area | DDSORTR2 | disk | When using large files, the Sort area should be split across two volumes (see Note). |
| Recovery log (RLOG) | DDRLOGR1 | disk | Required when using the recovery log option |
| ADARUN parameters | SYSDTA/ DDCARD | | <i>Operations</i> |
| ADAINV parameters | SYSDTA/ DDKARTE | | |
| ADARUN messages | SYSOUT/ DDPRINT | | <i>Messages and Codes</i> |
| ADAINV messages | SYSLST/ DDDRUCK | | <i>Messages and Codes</i> |

Note:

Performance can be improved when sorting large files if the sort data set is split across two volumes. If two data sets are specified, they must both be on the same device type (SORTDEV parameter), and each must be exactly half the size specified with the SORTSIZE parameter.
