- Installation 2

Adabas Caching can be used to improve system performance by augmenting the Adabas buffer pool in extended memory, data spaces, hiperspace and, in selected environments, 64-bit virtual storage, as well as 64-bit virtual backed by large pages which is enabled using the IBM z/OS Large Page Support provided with IBM z/OS 1.9 or above and enabled on the z10 IBM mainframe processor.

Adabas Caching Version 8.1.4 provides support for Virtual 64 storage backed by large pages in those environments that support this type of storage. When Virtual 64 storage is used, the controlling structures for ADACSH are also moved into Virtual 64 storage, thus removing some of the storage constraints when using very large cache spaces.

Supported Environments

For a complete list of the environments supported by Adabas Caching Version 8.1.4, see the section Supported Environments.

Installation

See Adabas Caching Installation for the steps required to install Adabas Caching.

Important: Before installing and using Adabas Caching Version 8.1.4, ensure that all Pre-requisites have been met.
