Installation

This documentation describes the installation process for Adabas Cluster Services.

It is important to review the entire installation procedure before starting the physical installation.

Depending on which components you actually install, it may be useful to group certain installation activities together, even though they may not be in the same installation section in this section. For example, if you are installing the Entire Net-Work XCF line driver, modifications to the CFRM policy for both the line driver and for parallel sysplex cache and lock structures can be made in a single step rather than in two separate steps.

Refer to *Adabas Cluster Services Release Notes* for specific information about late changes to this section.

Using System Maintenance Aid

If you use Software AG's System Maintenance Aid (SMA), refer to the *System Maintenance Aid* documentation for information about the installation process.

The installation procedures described in this section correspond to the jobs that SMA creates to install the product.

If you do not use SMA, you can modify and use the sample JCL provided to unload the Adabas Cluster Services and Entire Net-Work libraries from the installation tape.

The Adabas Cluster Services Installation documentation is organized in the following topics:

●	Required Environment
●	Prerequisite Software Installations
●	What to Install
●	Overview of the Installation Procedure
