Before You Install

This section describes actions which must be taken prior to performing Adabas Transaction Manager installation.

Note:
If you are upgrading from Adabas Transaction Manager Version 7.4/7.5, refer to the section Upgrading from Earlier Versions of ATM before proceeding with the installation.

- Actions Required Prior to Installation

- Actions Required Prior to Installation Verification

Actions Required Prior to Installation

The following actions need to be taken prior to installation:

- reserve a unique DBID for the transaction manager in each operating system image

- identify the TP system library names to be used

- identify the Adabas library names to be used

- install Adabas Version 7.4.3 or above

- install Adabas System Coordinator Version 8.1

Actions Required Prior to Installation Verification

To verify the installation, two databases running with `ADARUN DTP=RM` are required:

- one database containing a standard Employees file, and

- one database containing a standard Vehicles file

During the verification process, views of these files must be available in the Natural environment in which Adabas Transaction Manager Online Services is to be run.
