Preface

This document provides an overview of the Adabas Vista tool AVILOOK.

AVILOOK Function

AVILOOK Sample Output

AVILOOK Execution

1 AVILOOK Function

The Adabas Vista analysis tool AVILOOK provides statistics on the type and quantity of key-based accesses against an Adabas file. This information can be used to identify the Adabas files that may benefit from the Adabas Vista partitioning option.

2 AVILOOK Output

At normal database termination, the statistics gathered during AVILOOK processing are written to the database job log.

The following screen is an example of the output provided by AVILOOK.

```
16:56:07 ***** A D A B A S VISTA SERVICES 8.1.2 *****                2006-05-29
                                     - Avilook File Statistics -                V14120M1

DBID: 231   (TEST-V8-DB)
File: 2                                           Started: 2006-05-29 09:09:20
                                                Paused:

      CC   Desc   Command Count           CC   Desc   Command Count
      L3   AA           2836           L3   AA           2836
      S1   AB           1324           S1   AB           1324
      L3   BC            24              L3   BC            24
      L9   S1            26              L9   S1            26

Other Commands not listed above: 1558

Command ==>
Enter-PF1---PF2---PF3---PF4---PF5---PF6---PF7---PF8---PF9---PF10--PF11--PF12
      Help           Exit Refr                               Menu
```

This screen shows statistics on the command type and quantity of key-based accesses against the file (for example, S1, L3, and L9 commands). The statistics are displayed in descending order by command code (CC) and Adabas two-character field name (Desc).

In the example, there are 2836 accesses to file 2 using an L3 command with the Adabas field AA as the primary sequence field. Such a file, where the predominant access is by a single key, may benefit from being partitioned using the Adabas field AA as the Adabas Vista partitioning field.

3 AVILOOK Execution

AVILOOK is invoked and executed using Adabas Vista Online Services. Refer to Adabas Vista Online Services, function AVILOOK, for further information.
