Session Monitoring

The Session Monitoring function can be used to obtain information anfd statistics on all applications being managed by the Adabas System Coordinator.

- Session Monitoring Menu

- Change Perspective

- Display Adabas Client Job Information

- Display Session Information

- Network Discovery

- Display Daemon Group Members

- Display Cache Statistics

Session Monitoring Menu

▶ **To display the Session Monitoring menu**

- Select service 2 from the main menu.

```
10:57:19 ***** A D A B A S   SYSTEM COORDINATOR 8.1.2 (I003) *****  2008-05-22
                  - Session Monitoring  -                      C12000M1
 Run-mode: Local (node 0)                      Perspective: Daemon (node 650)

               Code    Service
               ----    ------------------------
                0       Change Perspective
                1       Adabas Client Job Information
                2       Memory Pool Statistics
                3       Network Discovery

 Enter-PF1---PF2---PF3---PF4---PF5---PF6---PF7---PF8---PF9---PF10--PF11--PF12---
      Help       Exit                                                Menu
```

From this menu, you can	Service	Cmd
change perspective	0	
display active Adabas client jobs	1	2.1
display memory pool statistics	2	
network discovery	3	2.3
display daemon group members	4	2.4
display cache statistics	5	2.5

All session monitoring requests will be directed to the current information source as displayed in the Perspective field at the top of the screen. By default this will be either your local client session when you are running in Local (non-daemon) mode or if you are running in daemon mode, monitoring requests will be directed to your coordinator daemon. Options 4 and 5 are only available if you are currently using daemon perspective, as in the example screen above.

Change Perspective

This option can be used to route monitoring requests to any active coordinator daemon or to your local client session (see screen below).

▶ **To access the Change Perspective screen from the Session Monitoring menu**

- Select service 0.

```
+-----------------------------------------------------------+
| 11:12:59        Change Perspective        2008-05-22   |
| Current perspective: Daemon (node 650)      C12PSPM1   |
|                                                           |
| Local:  Shows session monitoring information for this  |
|         job and active targets of the Adabas router   |
|         in use by this job                             |
| Daemon: Shows session monitoring information for jobs  |
|         managed by the System Coordinator daemon and   |
|         active targets known to the daemon             |
|                                                           |
| Revert to local (node 0)......: _                      |
| Change to daemon node.........: _____                  |
|                                                           |
|                                                           |
|          PF3 Exit    PF5 Set perspective               |
|                                                           |
+-----------------------------------------------------------+
```

Change perspective by marking "Revert to local" or entering a daemon node and pressing PF5. For jobs defined to run in daemon mode other options are available:

```
+----------------------------------------------------------+
| 11:17:04          Change Perspective        2008-05-22  |
| Current perspective: Daemon (node 660)      C12PSPM1     |
|                                                          |
| Local:  Shows session monitoring information for this   |
|         job and active targets of the Adabas router     |
|         in use by this job                              |
| Daemon: Shows session monitoring information for jobs   |
|         managed by the System Coordinator daemon and    |
|         active targets known to the daemon              |
|                                                          |
| Revert to daemon (node 650)...: _                       |
| Change to daemon node.........: _____                   |
| Change to local (node 0)......: _                       |
|                                                          |
|            PF3 Exit    PF5 Set perspective               |
|                                                          |
+----------------------------------------------------------+
```

Mark "Revert to daemon…" and press PF5 to revert to the job's default daemon (after changing perspective to another daemon) or mark "Change to local…" and press PF5 to switch to local perspective.

Display Adabas Client Job Information

▶ **To display the Adabas Client Jobs screen from the Session Monitoring menu**

● Select service 1 or enter the command 2.1 on a command line.

```
 11:35:09 ***** A D A B A S  SYSTEM COORDINATOR 8.1.2 (I003) *****  2008-05-22
                    - Adabas Client Job Information  -        C12100M1
 Run-mode: Local (node 0)                      Perspective: Local (node 0)
                                             Start Time           Maximum
 C  Service     Job Name   Job Num.   Appl.ID  (HH:MM.SS) Sessions Concurrent
 _  None        DAEFCI18   C24243     DAEFCI18  16:30.46      14         1

 Mark with D(etail),S(essions),M(emory Pools),R(efresh Job Debug Parms),(sna)P
 End of List
 Command ==>
 Enter-PF1---PF2---PF3---PF4---PF5---PF6---PF7---PF8---PF9---PF10--PF11--PF12---
      Help        Exit  Refr                                          Menu
```

This screen shows the TP monitors and other tasks that are currently active and managed by Adabas System Coordinator. Local perspective shows the job that you are executing in, daemon perspective shows all jobs managed by that daemon. The following fields are displayed:

Field	Description
C	This field can be used to display additional information: • D: display internal information • S: display session information • M: display memory pool information • R: refresh client debug controls • P: snap internal information to CORDUMP
Service	The clustered application service name (if any) used by this job.
Job ... Appl. ID	The job name, job number, and Application ID
Start Time	The start time of the job.
Sessions	The number of user sessions active in the job.
Maximum Concurrent	The number of concurrent threads active. This is a measure of the highest level of concurrent Adabas command throughput.

Display Memory Pools

Selecting Memory Pool Statistics results in the following screen being displayed:

```
11:41:34 ***** A D A B A S   SYSTEM COORDINATOR 8.1.2 (I003) *****  2008-05-22
                  - Display Memory Pool Statistics -         C12200M1
 Run-mode: Local (node 0)                    Perspective: Local (node 0)
                                        Pool        Free        Free
 C     Node    Job Name    Pool Name   Extents  Size(k)   Memory(k)  Elements   Type
 _     LOCAL   DAEFCI18    F8108320       0       256       243.8        30      O
 _     LOCAL   DAEFCI18    F8132896       0       256       192.8         6      O

  Mark with D(etail),S(nap)
 End of List
  Command ==>
 Enter-PF1---PF2---PF3---PF4---PF5---PF6---PF7---PF8---PF9---PF10--PF11--PF12---
      Help          Exit  Refr                                         Menu
```

This screen shows the memory pools that are used by jobs. The following information is provided:

Field	Description
Pool Name	The PRIVATE pool is allocated in the job's private memory. The PRIVUSER pool is used for client session context information, and is located in the job's private memory. When the job is running in DTR (daemon) mode, this pool is located in system shared memory, and takes the same name as the DTR runtime control for the job. Shared memory pools are always managed by a coordinator daemon. Fixed pools are named F*vrnnnnn* where *vr* is the product version and revision level and *nnnnn* is the pool element size. These pools are created automatically by System Coordinator on demand from add-on products. They require no customer tuning, other than possibly increasing the initial pool size, if required (See Extents below).
Extents	The number of extents. There may be a very slight performance improvement when runtime control parameters are tuned to eliminate extents. However, COR memory management is efficient, and pool extensions do not necessarily indicate any problem. The initial size of the session context pool (PRIVUSER or DTR service name) can be increased by specifying a larger value for "Estimated client sessions" in the job's runtime control. The initial size of all fixed pools is 256K by default. This can be increased to a maximum of 2560K in the job's runtime control.
Free Memory	The amount of free memory available in all extents in the pool.
Free Elements	The number of free elements in the pool.
Type	Pool type. O: The job created and owns the pool P: The job has joined a pool that was created by a previous job

Memory pool display can also be selected from the Session Monitoring menu (option 2).

Display Session Information

See next section Display Session Information.

Display Session Information

Selecting Display Session Information results in the following screen being displayed:

```

     Help        Exit  Refr  SortN Top   Back  Fwd   SortT SortU SortO Menu
```

This screen shows the client sessions that are active in a job managed by the Adabas System Coordinator. The following information is provided:

Field	Description
Session ID	The Session ID (last 8 characters only). IDs comprised of special characters are normally generated by the system.
Txn	The current or last Transaction ID executed (TP systems only). The value '*timeout' indicates that the inactivity threshold has been reached for this client session.
Dormant	The amount of time since the last user activity.
Memory	The amount of memory allocated by the user.
Adabas Cmds	The number of Adabas commands executed for this user.
Quick Locate	The number of times the coordinator optimized command processing because two or more commands for the same user were executed consecutively.
Type	Indicates whether or not the user is managed by an Adabas System Coordinator daemon. A value of 'S' indicates that the user is managed by a Adabas System Coordinator daemon.

PF keys can be used to sort the user list in various sequences:

Key	Description
PF5 (SortN)	The list is sorted by User ID.
PF9 (SortT)	The list is sorted in descending time since the user was last active.
PF10 (SortU)	The list is sorted in descending order of the number of Adabas calls issued.
PF11 (SortO)	The list is sorted in descending order of user search optimization. This shows the number of times for each user that an index search was avoided.

Mark a session with one of the commands shown:

- D: display internal information

- S: snap internal information to CORDUMP

- P: purge this session. Be careful not to purge a session that is still in use as this may have unpredictable results. You must confirm the purge request with PF5:

```
+---------------------------------------------+
|  16:01:32      Purge Session      2006-10-09 |
|                                    C12233M1  |
|                                              |
|              Session ID: UKSJU  4            |
|                                              |
|              PF5 to Confirm Purge            |
|                                              |
|  WARNING:                                    |
|  Purging a session can cause catastrophic    |
|  unpredictable results including failure of  |
|  the whole service. You must be absolutely   |
|  sure the session is gone completely and is  |
|  not going to reactivate.                    |
|                                              |
|                                              |
|  Command ==>                                 |
|       PF1 Help    PF3 Exit    PF5 Purge      |
|                                              |
+---------------------------------------------+
```

- T: activate or deactivate client debug monitoring for a session

- C: display or modify client runtime controls for a session. Select which product's controls you want to see:

```

Each Adabas System Coordinator daemon maintains a list of targets that are or were at one time active. This information is communicated to all daemons in the cluster.

When the perspective is daemon, this screen displays the network from that daemon's perspective.

2. You can change the perspective to another daemon or local by pressing PF5:

```
 +------------------------------------------------------------+
 |  11:56:09          Change Perspective        2008-05-22  |
 |  Current perspective: Daemon (node 650)      C12PSPM1    |
 |                                                            |
 |  Local:  Shows session monitoring information for this   |
 |          job and active targets of the Adabas router     |
 |          in use by this job                              |
 |  Daemon: Shows session monitoring information for jobs   |
 |          managed by the System Coordinator daemon and    |
 |          active targets known to the daemon              |
 |                                                            |
 |  Revert to local (node 0)......: x                        |
 |  Change to daemon node.........: _____                    |
 |                                                            |
 |                                                            |
 |         PF3 Exit    PF5 Set perspective                   |
 |                                                            |
 +------------------------------------------------------------+
```

Select the required perspective and press PF5.

3. Local perspective shows the targets active on the Adabas router that your client session is connected to:

```

       Help  Peek  Exit  Refr  Persp                               Prods Menu
```

4. On systems where the Adabas router uses an SVC, you can use PF2 to "peek" at targets active on another SVC:

```
+----------------------------------------------------------+
|  12:01:21           Change Router          2008-05-22    |
|  Current perspective: Local (node 0)       C12300M3      |
|                                                          |
|  You can peek into another Adabas router in the local    |
|  computer by entering the SVC number BUT...              |
|  WARNING: If you specify an incorrect SVC, there will    |
|  be unpredictable results such as outage of the whole    |
|  TP service and or transaction failures, loops etc.      |
|                      SVC: 254                            |
|                                                          |
|                                                          |
|           PF3 Exit    PF5 Set peek                       |
|                                                          |
+----------------------------------------------------------+
```

Enter the required SVC number and press PF5. Take note of the warning and be careful to specify a valid Adabas SVC number.

```

Display Daemon Group Members

▶ **To display the daemon group members screen from the Session Monitoring menu**

1. Select service 4 or enter the command 2.4 on a command line.

```
12:07:12 ***** A D A B A S   SYSTEM COORDINATOR 8.1.2 (I003) *****  2008-05-22
                   - Display Daemon Group Members  -             C12400M1
 Run-mode: Local (node 0)                    Perspective: Daemon (node 650)
                                Start Time          <----Cluster Moves--->
 Coordinator Name  Node  System  (HH:MM.SS)  Sessions     Total   Ave. Size
 ICFDCOR1           650  DAEF     08:43.25       0           0         0
 ICFDCOR2           660  DA2F     08:43.30       0           0         0

 End of List
  Command ==>
 Enter-PF1---PF2---PF3---PF4---PF5---PF6---PF7---PF8---PF9---PF10--PF11--PF12---
      Help        Exit  Refr                                        Menu
```

The screen shows the daemons that are active in the coordinator group. This option is only available when using daemon perspective, because node information is kept in the daemon, not in the local client.

The following information is provided:

Field	Description
Coordinator Name	The name and job number of the coordinator daemon task.
Node	The Adabas Node ID of the coordinator daemon.
System	The operating system ID.
Start Time	The start time of the coordinator daemon.
Sessions	The number of client sessions currently managed by this coordinator daemon.
Cluster Moves	The number of client sessions that have been routed dynamically to this system, and the average session message size per move. This field is only relevant for clustered applications in a multisystem environment.

Display Cache Statistics

▶ **To display the Cache Statistics screen from the Session Monitoring menu**

1. Select service 5 or enter the command 2.5 on a command line.

```

```

This screen displays the IBM sysplex coupling facility cache memory statistics. The definition of each statistical value is provided on a series of detailed screens, together with a repetition of the value.

Use PF11 to display a series of detail screens. Use PF10 to return to the last screen. You can then use the same PF keys to proceed forward or backward to the desired screen.

Cache statistics are valid only if the coordinator group is defined as type "Sysplex".
