

Overview

This document describes the Adabas System Coordinator Versioning Tool which enables multiple versions of Add-on products to co-exist in the Adabas servers and the clients that use them.

The versioning feature is primarily used to help with the transition from an old release to a new one; it is possible that it is able to be used to migrate from a release that is currently out of support but we cannot guarantee that. If you are unsure please contact Software AG to find out if your old release can be accommodated during a migration period.
