

Uninstalling Event Replicator Administration

The uninstallation of Event Replicator Administration on Windows and UNIX systems occurs as part of the corresponding Adabas Manager uninstallation. During uninstallation of Adabas Manager, you are given the option of uninstalling Event Replicator Administration.

For more information about uninstalling Adabas Manager and Event Replicator Administration, read *Installing Adabas Manager*. The uninstallation information is provided within the individual Windows and UNIX installation sections of the documentation.

Notes:

1. Uninstalling will not remove any files that were not originally installed by the Event Replicator Administration installation tool. For example, files modified, expanded, moved, or introduced after installation must be removed manually.
2. Uninstalling will not remove any products you have installed manually, such as Natural Runtime or the special FNAT. To uninstall such products, run the uninstallation procedure a second time, but select the specific product you want to remove (such as Natural Runtime) instead.
3. Uninstalling will stop Event Replicator Administration.
