

Entire Net-Work Administration

This document addresses administrators responsible for configuring and running an Entire Net-Work environment once the product is installed.

The Entire Net-Work Administration document is organized as follows:

●	<i>Entire Net-Work SMH Agent Administration</i>	Explains how to install and configure the Entire Net-Work Administration System Management Hub agents to monitor and maintain your Entire Net-Work Administration network configuration.
●	<i>TCP/IP Overview</i>	Provides general information about TCP/IP and its use by Entire Net-Work Administration.
●	<i>Simple Connection Line Driver Overview</i>	Provides information for administrators responsible for configuring and running the Entire Net-Work Simple Connection Line Driver once Entire Net-Work Administration is installed.
●	<i>Connecting to UES-Enabled Adabas Databases</i>	Describes how to connect to UES-enabled databases.
●	<i>Estimating Entire Net-Work Storage Requirements</i>	Provides tables to assist in estimating the storage requirements of Entire Net-Work Administration.
