

NODE Statement Parameters for SMH

Several parameters on the *Entire Net-Work NODE statement* are relevant to the System Management Hub. For complete information, read *Entire Net-Work NODE Statement*. Specify an appropriate value for the:

- ENDCMD parameter to indicate whether Entire Net-Work can be terminated from the System Management Hub.

Parameter Value	Indicates that
Y	Entire Net-Work Administration can be terminated from the System Management Hub.
N	Entire Net-Work Administration cannot be terminated from the System Management Hub.

- PASSWORD parameter to indicate whether operator commands from the System Management Hub should be accepted by the SMH driver.

Parameter Value	Indicates that
ALL	Operator commands from the System Management Hub can be accepted by the SMH driver.
any other value	Operator commands and other update requests such as Connect or Disconnect cannot be accepted by the SMH driver.

- LOGSIZE parameter if the console log is to be viewed from the System Management Hub.
