

Entire Net-Work Administration

Entire Net-Work Administration 6.2.1 Release Information

Version 6.2.1

June 2014

This document applies to Entire Net-Work Administration Version 6.2.1.

Specifications contained herein are subject to change and these changes will be reported in subsequent release notes or new editions.

Copyright © 2014 Software AG, Darmstadt, Germany and/or Software AG USA, Inc., Reston, VA, USA, and/or its subsidiaries and/or its affiliates and/or their licensors..

The name Software AG and all Software AG product names are either trademarks or registered trademarks of Software AG and/or Software AG USA, Inc. and/or its subsidiaries and/or its affiliates and/or their licensors. Other company and product names mentioned herein may be trademarks of their respective owners.

Detailed information on trademarks and patents owned by Software AG and/or its subsidiaries is located at <http://documentation.softwareag.com/legal/>.

Use of this software is subject to adherence to Software AG's licensing conditions and terms. These terms are part of the product documentation, located at <http://documentation.softwareag.com/legal/> and/or in the root installation directory of the licensed product(s).

This software may include portions of third-party products. For third-party copyright notices and license terms, please refer to "License Texts, Copyright Notices and Disclaimers of Third-Party Products". This document is part of the product documentation, located at <http://documentation.softwareag.com/legal/> and/or in the root installation directory of the licensed product(s).

Document ID: WCA-RELNOTES-621-20140626

Table of Contents

1 Entire Net-Work Administration 6.2.1 Release Information	1
2 Enhancements	3
New Mainframe Licensing Incorporated	4
New Log Buffer NODE Parameters and Operator Commands	4
New Snap Dump Parameter and Operator Command	4
Performance Improvements	5
Encryption for Entire Net-Work Support	5
3 Installation Tape Information	7
Installation Tape Description	8
Product Code Description	8
4 Requirements and Restrictions	9
Adabas Components	10
Support for Earlier Versions	10
Supported Operating System Levels	10
TCP/IP Transport Providers Supported	11
5 Documentation	13
Viewing Software AG Product Documentation under Windows XP SP2	14
Index	17

1 Entire Net-Work Administration 6.2.1 Release Information

Entire Net-Work Administration is provided to allow various Adabas products to make calls to Adabas and Reptor databases residing on the mainframe . It communicates with Entire Net-Work Client components on open systems.

Entire Net-Work Administration 6.2 supports the new features of Adabas 8. Read this document carefully before installing and using Entire Net-Work Administration version 6.2. It covers the following topics:

<i>Enhancements</i>	Describes the enhancements made to Entire Net-Work Administration for Version 6.2.1.
<i>Installation Tape Information</i>	Describes the Entire Net-Work Administration 6.2 installation tape.
<i>Requirements and Restrictions</i>	Lists requirements and restrictions of Entire Net-Work Administration 6.2.
<i>Documentation</i>	Describes the documentation provided with Entire Net-Work Administration 6.2.

2 Enhancements

▪ New Mainframe Licensing Incorporated	4
▪ New Log Buffer NODE Parameters and Operator Commands	4
▪ New Snap Dump Parameter and Operator Command	4
▪ Performance Improvements	5
▪ Encryption for Entire Net-Work Support	5

This chapter describes the enhancements to Entire Net-Work Administration in this release.

New Mainframe Licensing Incorporated

A new licensing process for Entire Net-Work has been implemented in this release. This licensing process is managed by the standard Software AG mainframe product licensing software. Two new licensing libraries are now provided on the installation tape. Both libraries are distributed with names starting with the letters "MLC". In addition to these new libraries, a new licensing utility, LICUTIL, is provided that allows you to display and check your license file or to convert it to assembler source.

As a result of this new licensing software, some changes have also been made in the Entire Net-Work installation.

For more information on Software AG mainframe product licensing, read *Software AG Mainframe Product Licensing*, in the *Entire Net-Work Installation Guide*.

New Log Buffer NODE Parameters and Operator Commands

This release introduces two new NODE parameters and, correspondingly, three new operator commands that control the destination of log data and the size of the log buffer. The new NODE parameters are the LOGBUF parameter (which controls the destination of log data) and the LOGBUFSZ parameter (which controls the size of the log buffer). The new operator commands are the SET LOGBUF command (which can be used to change the destination of log data), the SET LOGBUFSZ command (which can be used to change the size of the log buffer) and the SNAP LOGBUF commands (which generates a snap dump of the log buffer to the DDPRINT file).

For more information about the new NODE parameters, read *Entire Net-Work NODE Statement*, in the *Entire Net-Work Reference Guide*; for more information about the new operator commands, read about the *SET Command* and the *SNAP Command*, in the *Entire Net-Work Reference Guide*

New Snap Dump Parameter and Operator Command

This release introduces a new NODE parameter, SNAPERR, that can be used to produce snap dumps whenever specified Entire Net-Work errors occur. Up to four Entire Net-Work message numbers can be specified. A corresponding SET SNAPERR operator command is also provided with which you can dynamically change the SNAPERR setting for a run.

Note: The SNAPERR parameter and SET SNAPERR operator command do not work for all error messages. Use SNAPERR only under the direction of your Software AG support representative.

For more information about the new NODE parameters, read *Entire Net-Work NODE Statement*, in the *Entire Net-Work Reference Guide*; for more information about the new operator commands, read about the *SET Command*, in the *Entire Net-Work Reference Guide*

Performance Improvements

Enhancements to buffer pool processing in this release of Entire Net-Work provide some overall performance improvement in Entire Net-Work processing.

Encryption for Entire Net-Work Support

This version of Entire Net-Work now supports the use of Encryption for Entire Net-Work to manage the security of message transmissions. However, this support is not automatically included with Entire Net-Work 6.2.1. If you plan to use Encryption for Entire Net-Work in your enterprise, please contact your Software AG sales support representative.

3 Installation Tape Information

- Installation Tape Description 8
- Product Code Description 8

The Entire Net-Work Administration 6.2 installation tape contains all of these components:

- The Entire Net-Work mainline processor and service routines.
- The Adabas components required by Entire Net-Work.
- The Simple Connection Line Driver components.

Installation Tape Description

Refer to the *Report of Tape Creation* that accompanies the tape for information about the Entire Net-Work Administration 6.2 installation tape, including tape density, media type, data sets, and data set sequence numbers. The online documentation describes the complete installation process. See the section *Entire Net-Work Installation* in the *Entire Net-Work Installation Guide*.

Product Code Description

The Entire Net-Work components are identified by the following product codes, which are used in the data set names on all Entire Net-Work tapes:

The Entire Net-Work Administration components are identified by the following product codes, which are used in the data set names on all Entire Net-Work Administration tapes:

Product Code	Description
MLC	Software AG's common mainframe license check software.
WAL	A set of Adabas components required to run Entire Net-Work. The WAL components are Adabas Version 8 for all platforms. Entire Net-Work requires the limited library modules to be at this level.
WCL	Entire Net-Work Client components
WCA	Entire Net-Work mainline processor and service routines that communicate with Entire Net-Work Client components.

4 Requirements and Restrictions

- Adabas Components 10
- Support for Earlier Versions 10
- Supported Operating System Levels 10
- TCP/IP Transport Providers Supported 11

This chapter describes the requirements and restrictions of Entire Net-Work Administration.

Adabas Components

Entire Net-Work Administration 6.2 requires the Adabas 8 components supplied in Adabas Limited Load Library (WAL). However, before Entire Net-Work Administration can function correctly, the most recent fix data set must be concatenated in front of the standard WAL load library.

Be sure your enterprise is running with the most current fix solution for WAL supported by Entire Net-Work Administration 6.2, when available for that platform.

Support for Earlier Versions

For information on how long a product is supported by Software AG, access Software AG's Empower web site at <https://empower.softwareag.com>.

Log into Empower. Once you have logged in, you can expand **Products** in the left menu of the web page and select **Product Version Availability** to access the Product Version Availability application. This application allows you to review support information for specific products and releases.

Supported Operating System Levels

Entire Net-Work Administration Version 6.2 can be installed on z/OS, z/VSE, z/VM, and BS2000 operating systems.

Before attempting to install Entire Net-Work Administration, ensure that the host operating system is at the minimum required level. For information on the platform versions supported by Software AG products, access the Software AG web site at <http://www.softwareag.com/corporate/products/bis/platforms/default.asp>.

To determine the particular platforms supported by this release of Entire Net-Work Administration, review the product version availability information, available on Software AG's Empower web site: <https://empower.softwareag.com>. Log into Empower. Once you have logged in, you can expand **Products** in the left menu of the web page and select **Product Version Availability** to access the Product Version Availability application. This application allows you to review support information for specific products and releases.

Software AG provides support for the operating system versions supported by their respective manufacturers. Generally, when an operating system provider stops supporting a version of an operating system, Software AG will stop supporting that operating system version.

Although it may be technically possible to run a new version of Entire Net-Work Administration on an old operating system, Software AG cannot continue to support operating system versions that are no longer supported by the system's provider.

If you have questions about support, or if you plan to install Entire Net-Work Administration on a release, version, or type of operating system other than those included at the link above, consult Software AG technical support to determine whether support is possible, and under what circumstances.

TCP/IP Transport Providers Supported

Entire Net-Work 6.2 supports the following levels of TCP/IP transport providers:

Platform	TCP/IP Protocol Supported
z/OS	IBM TCP/IP for z/OS Version 1.8, 1.9, and 1.10.
z/VM	IBM TCP/IP for z/VM Version 5.3 and 5.4.
z/VSE	IBM and Connectivity Systems TCP/IP z/VSE Version 3.1, 4.1, and 4.2.
BS2000/OSD Sockets Subsystem	Sockets Version 2.0 and above.

5 Documentation

- Viewing Software AG Product Documentation under Windows XP SP2 14

The documentation for this product is new with this release. If you have an Empower account, current, updated, and past versions of the documentation can be reviewed and downloaded by linking to the Software AG documentation, found on Software AG's [Empower](#) web site. If you do not have an Empower user ID and password yet, you will find instructions for registering on this site (free for customers with maintenance contracts).

The Entire Net-Work Administration documentation includes:

- online HTML topics describing all aspects of the product;
- Adobe Acrobat Reader Portable Document Format (PDF) files created from the HTML topics;
- Adobe Acrobat Reader Portable Document Format (PDF) files for a series of manuals created from the HTML topics.

The System Management Hub documentation can be found wherever the System Management Hub is installed. For example, if the System Management Hub is installed in Windows at C:\Program Files\Software AG\System Management Hub, then the SMH documentation can be found in: C:\Program Files\Software AG\System Management Hub\help\doc\overview.htm. Likewise, in UNIX environments, if SMH installation is located at \$SAG/common/arg, then the SMH documentation can be found in \$SAG/common/arg/help/doc/overview.htm.

No hard-copy documentation is provided, but you can print the PDF and HTML files on your local printer.

Viewing Software AG Product Documentation under Windows XP SP2

With Service Pack 2 (SP2) for Windows XP and Service Pack 1 (SP1) for Server 2003, Microsoft introduced a range of powerful new security features that restrict active content that runs locally on your computer. Active content includes ActiveX controls, Java applets, and JavaScript. Software AG's documentation web pages contain some JavaScript, and the SEARCH, INDEX and CONTENTS capabilities are implemented as Java applets. As a result, when viewing documentation web pages that reside on your PC using Internet Explorer and Mozilla Firefox under Windows XP SP2, note that active content is blocked. You must explicitly and repeatedly allow active content if you want to make use of the documentation's full navigation features. Note that this behavior is only observed when reading web pages installed locally on your PC, including those on CD in the PC's CD-ROM drive.

The active content for which Software AG is responsible, that is, the JavaScript code in our HTML documentation pages, will not harm your computers. The risk in using the navigation applets is negligible: Software AG has received no reports from users concerning any harm caused to a computer by the applets. We therefore suggest that when reading Software AG documentation in a local context, you should allow active content via the Security settings in the browser (with Internet Explorer, usually found under Tools > Internet Options > Advanced).

Full details of alternatives can be found on the home page of the suppliers of the navigation applets:
<http://www.phdcc.com/xpsp2.htm>.
