

# INT: Activate Interpreted Print Format

```
ADAICK INT [NOUSERABEND]
```

This function requests that blocks are printed in an interpreted format. See the NOINT function for information about suppressing interpreted print format. This function should only be used in conjunction with the ASSOPRINT, DATAPRINT, FCBPRINT, FDTPRINT, GCBPRINT, and PTPRINT functions.

If both the INT and DUMP functions are specified, blocks are printed in both formats.

**Note:**

The NOOPEN parameter can be specified for this function, but is ignored by Adabas.

---

## Optional Parameter

**NOUSERABEND: Termination without Abend**

When an error is encountered while the function is running, the utility prints an error message and terminates with user abend 34 (with a dump) or user abend 35 (without a dump). When NOUSERABEND is specified, it must be specified as the first parameter (before all other parameters) for the utility function.

If NOUSERABEND is specified, the utility will *not* abend after printing the error message. Instead, the message "utility TERMINATED DUE TO ERROR CONDITION" is displayed and the utility terminates with condition code 20.
