DISABLE: Disable Recovery Logging

ADARAI DISABLE

The ADARAI DISABLE function disables recovery logging by setting the RLOG table (control block) to inactive status.

Note:
ADARAI DISABLE must be executed with the database inactive.

Following DISABLE, information is no longer recorded in the RLOG and the current generation is ended. The content of the RLOG before DISABLE is maintained and can still be listed or otherwise used for recovery purposes.

Recovery logging can be started again by starting a new generation. See Generation: The Unit of Recovery .

Example:

```
ADARAI DISABLE
```

Deactivates all Recovery Aid logging.
