

Software AG Installer

Data Archiving for Adabas is installed using the Software AG Installer from the Software AG download center. The Software AG Installer center is sensitive to the products for which you are licensed. When you enter it you see all the products that you are able to install. Depending upon the platform you wish to install, you can install both the Runtime or the User Interface or both.

z/OS can only install the Runtime, for these systems you must install the User Interface in another platform type.

For Windows and Unix you can choose to install Runtime only, User Interface only or both depending upon what you wish to do.

Adabas System Coordinator is prerequisite sibling product with the same choices of Runtime only, User Interface only or both. These choices must match those you make regarding Data Archiving for Adabas.

When the User Interface is to be installed the System Management Hub will also be automatically selected because it is prerequisite.

The Installer will do the following under your direction:

- Download the install files to the computer location you request (or will arrange to ship a CD, DVD, etc.).
- Copy the files to the install location that you choose.
- Define the required local service (Windows only).
- Launch (or make available to launch) the product-specific activation component to finish off the installation.

Note:

In Windows a Start menu option is created for this function.
