

Installation Prerequisites

- Operating Systems
 - Adabas
 - Natural
-

Operating Systems

Adabas System Coordinator Version 8.2 is compatible with the following operating system environments:

- z/OS
- z/VSE
- BS2000

Note:

System Coordinator currently executes in 31-bit addressing mode only.

Adabas

Adabas System Coordinator can be used with any supported level of Adabas Version 8.1 or above. Refer to the Adabas documentation for more information.

The following Adabas maintenance must be applied to use System Coordinator 8.2 in CICS TP systems:

-
- fix CI822006 if you use the Adabas 8.2.2 CICS interface
- fix CI823002 if you use the Adabas 8.2.3 CICS interface

Note:

The supplied COR821.LX01 library is required. This contains the COR Version 8.2 database components (ADAPOx, AFPADA, AVIADA). This library must be added to the start of the load library concatenation in all database startup procedures, replacing the equivalent modules in the Adabas Library.

Note:

For BS2000 installations: The COR821.LX01 library must be named in the ADD-FILE-LINK statements for the DDLIB and the BLSLIB00 file links.

Natural

Natural is required by the Online Services application SYSCOR.

Any supported level of Natural Version 4.1 or above can be used. Refer to the Natural documentation for more information.
