

# Operation

The database versioning tool will issue one or more of the following messages during nucleus initialization. These can be used to verify that the software is installed correctly, and the correct product/version sets modules have been located.

Message	Description
VER001 VER001I	VERPOP initialized
VER002 VER002I	ADAPOP $n$ loaded for Version $vrl$
VER003 VER003S	No versioning table found, cannot continue
VER004 VER004W	No versioning products found, calls suppressed
VER005 VER005W	ADAPOP $n$ not found for Version $vrl$
VER006 VER006I	ADApp $p$ loaded for Version 713
VER007 VER005W	ADApp $p$ not found for Version 713

Execution of more than one version will have an impact on the memory allocation for the database. Memory region sizes may need to be reviewed.
